

2E-EDUC 3- Principles and Methods of Teaching

Worksheet on Critiquing a Sample Instructional Plan and Compiling the Teaching Approaches and Strategies Used in Different Learning Areas

Lesson Plan Group: Language Group

Names of Members:

1. Ivan Dione Soria
2. Rose Marianne Louis Gardoce
3. Donna Jane Panaguiton
4. Kenn Arcenal

Date Submitted: August 14, 2026

Directions:

1. This is a **Group work** following the Lesson Plan grouping.
2. Your team will study/analyze the different sample lesson exemplars representing the different learning areas adopting various instructional designs (e.g. IDEA, MEDIA, 4A's, 7E's and MATATAG Science of Learning).
3. The sample unit/weekly lesson exemplars were developed by DepEd Region IV A – Using PIVOT IDEA Model found in the link below <https://drive.google.com/file/d/1J1FMJLOYlpMGbTjcAWS3Y1tBMjC2PTzL/view>

The subjects and grade levels are as follows:

						Evaluate Extend	Evaluate Extend
Subject Matter/ Topic	Communication Models (Oral Communication in Context, SHS). Modular Distance Modality (learner-led).	Suliranin at Hamong Kinaharap sa Ikatlong Republika ng Pilipinas (Problems and challenges faced under the Third Republic, 1946-1972). Online Distance Learning Modality.	Safety Regulations in Working in the ICT Environment, under the subtheme Managing Emotions (Grade 7 TLE-ICT, First Quarter). Face-to-face session built on the MEDIA design, with GCED integration toward SDG 8 (Decent Work and Economic Growth).	Advantage of High Biodiversity (Science 9, Quarter 3, Week 4). Face-to-face classroom delivery across five days under the MATATAG Science-of-Learning design.	Mapanagutang Paggamit ng Social Media Bilang Mamamayan (Responsible Use of Social Media as a Citizen). Grade 7 Values Education, Fourth Quarter (Pamayanan Bilang Lunsaran ng Pagpapakatao), delivered as an integrated New Literacies lesson centered on media literacy.	Buying and Selling, with the sub-topic Mark-on, Mark-down, and Mark-up (Grade 11 Business Mathematics for ABM, First Quarter). Session structured on the 7E model.	Matter: Gas Laws, covering the concept of pressure and volume, Boyle's Law (pressure and volume at constant temperature), and Charles' Law (volume and temperature at constant pressure) (Science 10, Quarter 4). Face-to-face, forty-minute session.
Learning Competencies	MELC: Differentiates the various models of communication.	MELC: Nasusuri ang pangunahing suliranin at hamong kinaharap ng mga Pilipino mula 1946 hanggang 1972. Enabling: discusses post-war livelihood problems and the Philippine-American military-bases relationship. Enrichment: identifies events after WWII that helped or harmed Filipinos.	Content Standard: Learners demonstrate an understanding of Occupational Safety and Health (OSH) standards in ICT environments. Competency: Discuss OSH standards in ICT environments.	MATATAG Learning Competency: Explain the advantage of high biodiversity in maintaining the stability of an ecosystem during difficult conditions, such as food shortages, disease, and climate change.	Content Standard: Natututuhan ng mag-aaral ang pag-unawa sa mapanagutang paggamit ng social media bilang mamamayan (understanding the responsible use of social media as a citizen). Competency: Nakapagsasanay sa disiplina sa pag-iingat sa mga inilalagay sa sariling social media (practising discipline in what one	Content Standard: Learners demonstrate an understanding of key concepts in buying and selling. MELC: Differentiate mark-on, mark-down, and mark-up (ABM_BM11BS-Ig-1). Enabling competencies: perform fundamental operations on fractions and decimals, and compare and differentiate	Learning Competency (LC Code S10MT-IVa-b-21): Investigate the relationship between the volume and pressure of a gas at constant temperature, and between the volume and temperature of a gas at constant pressure.

					posts and messages), through recognizing, justifying, and enacting responsible social media use.	ratio and rate.	
Learning Objectives	At the end of the lesson, learners are expected to: a. Differentiate various models of communication (Cognitive); b. Explain the process of communication through the elements involved (Cognitive); and c. Recognize the importance of models in understanding the communication process in everyday life (Affective).	Sa araling ito, inaasahang ang mag-aaral ay: a. Natutukoy ang mga kontribusyon ng mga pamamahala mula 1946 hanggang 1972 (Cognitive); b. Nahihinuha ang mga suliranin at hamong kinaharap ng mga Pilipino mula 1946 hanggang 1972 (Cognitive); at c. Napahahalagahan ang mga ambag ng pamamahala sa pamamagitan ng pagbuo ng suhestiyon sa pagtugon sa kasalukuyang suliranin (Affective / HOTS).	At the end of the lesson, learners are expected to: a. Explain the safety regulations while working in ICT environments (Cognitive); b. Apply safety precautions when setting up or handling ICT equipment, following standard safety procedures (Psychomotor); and c. Demonstrate a positive attitude towards adhering to safety guidelines while working in ICT environments (Affective).	At the end of the lesson, learners are expected to: a. Define high biodiversity (Cognitive); b. Differentiate high biodiversity from low biodiversity (Cognitive); c. Identify the advantages of high biodiversity in maintaining the stability of an ecosystem during difficult conditions such as food shortages, disease, and climate change (Cognitive); and d. Recognize the importance of high biodiversity in maintaining ecosystem stability (Affective).	At the end of the lesson, learners are expected to: a. Identify three ways to responsibly manage their social media accounts, focusing on the messages they share (Cognitive); b. Analyze two real-world issues presented on social media, evaluating accuracy and bias (Cognitive); and c. Create a brief social media post that promotes positive online behavior and civic engagement (Cognitive and Psychomotor, with an affective values dimension).	At the end of the lesson, learners are expected to: a. Define, compare, and contrast mark-on, mark-down, and mark-up (Cognitive); b. Determine and calculate mark-on, mark-down, and mark-up using real-life problem situations (Cognitive and Psychomotor); and c. Reflect and collaborate with group members on the essentials of the three concepts, producing a group report (Affective and Psychomotor).	At the end of the lesson, learners are expected to: a. Investigate the relationship between the volume and pressure of a gas at constant temperature, Boyle's Law (Cognitive and Psychomotor); b. Investigate the relationship between the volume and temperature of a gas at constant pressure, Charles' Law (Cognitive and Psychomotor); and c. Apply Boyle's and Charles' Laws to solve for the final state of a gas and to explain everyday phenomena (Cognitive). (The 7E plan states these as the learning competency rather than as separate lesson objectives.)

Strategies / Techniques Used for the following:							
Preliminary Activities	Introduction (What I need to know? / What's new?): walkthrough of lesson expectations and objectives founded on KSAV principles; a prompt-question activity; guided reading of the short selection 'The Glitch' by Divina P. Maming, done interactively with parents, guardians, or housemates, followed by comprehension questions. Strategy: activating prior knowledge and motivation through a literary text and real-audience interaction.	Panimula (Introduction): online-conduct reminders; 'Balitaan muna Tayo' current-issue sharing (three-minute discussion); 'Balikan Natin' recall of the Third Republic presidents through raise-hand responses; a 'Concept Map: Ugnay-Lawak-Kaisipan' word-association web shared on screen; and a 'Puzzle: Guess Who?' picture-reveal game matching problems to presidential terms. Strategies: motivation through current events, activating prior knowledge, concept mapping, and gamification.	Classroom Routines and Motivate: greeting and a brief well-being check, then a motivational safety video ('Zig Zag Electricity Man') that learners watch and connect to the day's topic, followed by a learner reading the posted objectives. Strategies: routine-setting, motivation through audiovisual media, and objective-setting.	Activating Prior Knowledge and Establishing Lesson Purpose (Day 1): a 'Biodiversity: Fact or Myth' short review in which learners judge ten belief-statements as scientifically based or as misconceptions; an 'Essential Concept Activity' using a matrix to identify the importance of biodiversity; and teacher-led unlocking of content-area vocabulary (biodiversity, high biodiversity, low biodiversity). Strategies: activating prior knowledge, misconception checking, graphic-organizer mapping, and vocabulary	Preliminaries and Motivation: opening prayer, classroom clean-up and rules, attendance, and reading of the objectives, followed by a 'Lie Detector' game in which learners in threes share two truths and one fabricated statement and guess each other's, surfacing the idea that shared information may be genuine or false. Strategies: routine-setting, and motivation through an interactive game that introduces the theme of misinformation.	Elicit and Engage: the teacher illustrates what buying and selling are, identifies the buyer and the seller, and consolidates the concepts in one slide (Elicit); then presents different modes and market channels where mark-on, mark-down, and mark-up appear in real prices and pricing schemes (Engage). Strategies: activating prior knowledge through illustration, and motivation through real market examples.	Elicit and Engage: recall of the previous lesson on ecosystems and population growth, followed by observation prompts (a shaken soda bottle and bubbles rising from the seabed) that lead learners to define volume; then guiding questions on why divers wear special suits and why a submarine outweighs an airplane, which surface how pressure changes with elevation and lead to the definition of pressure. Strategies: activating prior knowledge, motivation through familiar phenomena, and guided questioning toward conceptual definitions.

				unlocking.			
Developmental Activities	Development and Engagement (What I know? / What's in? / What is it? / What's more? / What I can do?): a 15-item diagnostic on communication; a word-pool vocabulary task using context clues; concept presentation on the communication models with optional online links; a Venn diagram comparing models; grid-filling on the elements of communication; and authentic tasks such as calling a friend or interviewing family members. Strategies: expository concept presentation, self-paced reading, graphic organizers (Venn diagram), vocabulary building, and real-life application tasks.	Pagpapaunlad and Pakikipagpalihan (Development and Engagement): screen-shared PowerPoint on the problems faced by each president (1946-1972) with chatbox participation; a 'Timeline: Balangkasin Natin sa Panahon' sequencing task; a 'Tayo mag-MOBA Guess-Who' activity identifying figures on Philippine bank notes and their contributions; and a poem-writing task on a chosen problem shared to the Google Classroom wall. Strategies: interactive lecture-discussion, timeline construction, contextualized analysis, and creative-response writing.	Explore, Discuss, and Innovate: learners observe a photo of a computer laboratory and judge what makes it safe or unsafe (Explore); the teacher then delivers the content on the three aims of safety guidelines, the safety precautions when working, and the fire-safety steps (Discuss); and a 'Think About It' task asks learners to imagine themselves as a teacher managing a computer laboratory, extending the lesson to managing emotions and to the physical, emotional, and social safety of diverse learners, which carries the subtheme and GCED integration (Innovate). Strategies: picture-based exploration, interactive lecture-discussion, and perspective-taking toward values and GCED integration.	Developing and Deepening Understanding (Days 2 to 3): explicitation through guided reading of an informational text on the types of biodiversity, species richness and abundance, hotspots, and the factors that influence biodiversity; individual worked examples, namely 'Clash of the Biodiversity' (photo-based questioning), 'Unveiling the Unknown' (cloze paragraph), and 'High vs. Low' (picture discrimination); and a group 'News Exposé Extravaganza' in which learners read an article, draw out the five reasons biodiversity matters, draft a report, and present visual aids on cartolina. Strategies: explicit teaching, guided	Activity, Analysis, Abstraction, and Application (the 4A's proper): learners write on sticky notes their ways of using social media responsibly, then group and rank the common answers (Activity); processing questions draw out shared practices, the challenges people face, and why responsible use matters (Analysis); the teacher formalizes the concept of media literacy, its different forms, and its guiding principles (Abstraction); and two groups analyze media samples for bias and persuasive language, exchange and critique each other's work, and present their evaluations (Application). Strategies: brainstorming with ranking, guided questioning, expository instruction, and	Explore, Explain, and Elaborate: a 'Wise Shopper' role-play in which some learners act as buyers applying mark-down and others as sellers applying mark-on and mark-up from a given scenario (Explore); direct instruction on the standard definitions and origins of the three terms and the roles and responsibilities in buying and selling (Explain); and worked computations with spreadsheet tools, practice exercises, and a discussion of exemptions and common misconceptions (Elaborate). Strategies: role-play simulation, expository instruction, and worked-example problem solving with technology integration.	Explore, Explain, and Elaborate: a hands-on ideal-gas simulation in which learners vary the volume at constant temperature and record the pressure, average kinetic energy, and root-mean-square speed before answering guide questions; a teacher-led formalization using real atmospheric and underwater pressure data that introduces Boyle's Law (1662) and Charles' Law (1787) with their plots and equations; and worked sample problems applying both laws (validating the simulation data, a diver's rising air bubble, and a cooled syringe). Strategies: guided inquiry through simulation, interactive lecture-discussion with graph interpretation, and worked-example problem solving.

Closure	Assimilation and Reflection (What I have learned? / What I can do? [Assessment] / Reflection): synthesizing questions on the topic, a self-checked assessment with an answer key, and a written reflection using the prompts 'I understand that ___' and 'I realize that ___' in a notebook, journal, or portfolio. Strategy: synthesis, self-assessment, and reflective (metacognitive) writing.	Paglalapat and Pagninilay (Assimilation and Reflection): an 'Exit Card: Paksa-Halaga-Natutunan ko' completed via a Google link; a 'Gagawin kong Sana All' task pairing an image of a problem with an image of a solution and proposing how to solve it; and a reflection using 'Naunawaan ko na ___' and 'Nabatid ko na ___'. Strategies: exit-card synthesis, problem-solution analysis, and reflective writing.	Assess: a performance task in which learners observe a workplace photo and write five sentences judging whether it shows the correct safety precautions, scored with a four-criterion rubric on ideas, organization, understanding, and mechanics. Strategy: performance-based assessment with a rubric.	Making Generalizations and Evaluating Learning (Days 4 to 5): a 'Check your Memory!' task listing ecosystems of high and low biodiversity and the advantages of high biodiversity; a 'Reflection Entry' comparing and contrasting high and low biodiversity; an eight-item multiple-choice formative assessment; and a vocabulary-defining homework. Strategies: generalization and synthesis, reflective compare-and-contrast writing, formative multiple-choice testing, and consolidation through homework.	Assessment and Homework: a 'Ready, Set, Action!' task in which groups draft an action plan themed on advocating against misinformation and disinformation, scored with a rubric on quality of information, collaboration, and integration of media literacy; and homework to implement and document the advocacy plan for a later multimedia presentation. Strategies: performance-based group assessment with a rubric, and real-world application through an advocacy project.	Extend, Evaluate, and Reflect: a two-week group performance task surveying at least two business owners on how they apply the three concepts, written up as a report scored with a rubric on terminology, organization, construction, and promptness (Extend); a twenty-item test on mark-on, mark-down, and mark-up set in real-life situations, delivered through Google Forms (Evaluate); and a guided reflection using the cues 'I understand that' and 'I realize that' (Reflection). Strategies: performance-based survey project with a rubric, summative testing, and metacognitive reflective writing.	Evaluate and Extend: a summative multiple-choice assessment delivered through Google Forms or presentation slides; and a homework task asking learners to explain the gas law at work in everyday situations, such as a bicycle pump and a hot-air balloon. Strategies: summative multiple-choice assessment and application of concepts to real-life contexts.

PART II. OUR CRITIQUE OF A SAMPLE LESSON EXEMPLAR/LESSON PLAN

1. Your group will select **Only ONE (1) Lesson Exemplar** to analyze and/or critique which is **closest/related to your discipline and or group lesson plan**.

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

PHILIPPINE NORMAL UNIVERSITY
The National Center for Teacher Education
COLLEGE OF ALTERNATIVE AND LIFELONG LEARNING

Taft Ave. cor. Ayala Blvd., Ermita, Manila

| call@pnu.edu.ph

2. Your group will give comments and suggestions based on the philosophies, theories and principles of teaching you have learned from the 2E-EDUC 2 and 2E-EDUC 3 courses as well as your personal /professional experiences.

Our group finds the English Grade 11 lesson to be generally effective because it reflects a **learner-centered** and **constructivist** approach. The lesson does not focus only on presenting the different models of communication. It also allows learners to develop their understanding through vocabulary activities, graphic organizers, comparison tasks, and authentic communication activities such as calling a friend or interviewing family members. It is also noticeable that in the learning objectives highly relies on cognitive aspects for learning which is suitable for this subject and discussion as it trains the brain for deeper understanding towards the concept, not only for application. Additionally the activities and lesson helps the students to enhance their organizational skills by organizing and flow of ideas through constructivist activities.

~~From our personal and professional experiences we believe that communication is best learned through actual practice. Since the subject is Oral~~

However, we suggest providing more **interactive and collaborative activities**, particularly activities where students can analyze real communication problems. For example, students could examine a situation involving misunderstanding and identify the sender, receiver, message, feedback, and noise. They could then explain which communication model best represents the situation and suggest ways to improve the communication.

We also suggest giving learners more opportunities for **reflection and application** by the end of the lesson for them to undergo application, creation, and evaluation of knowledge, which is a the highest form of intelligence according to Bloom's Taxonomy. After completing an interview or conversation, students could reflect on what made the communication effective or ineffective. This would help them connect the theoretical concepts to their personal experiences.

Overall, we believe that the lesson is well aligned with the principle that **learning should be meaningful, active, and connected to real-life experiences**. With additional opportunities for collaboration, problem-solving, and reflection, the lesson could further develop students' communication competence and higher-order thinking skills.

3. **Copy and paste the full/whole lesson** exemplar your group has chosen/selected below and **add ONE column** to write down your comments and suggestions.

LESSON EXEMPLAR (English, Grade 11 SHS)	OUR COMMENTS AND SUGGESTIONS
Header. Learning Area: English (SHS) - Oral Communication in Context. Grade 11. Teacher: John Dela Cruz. Modality: Modular Distance (Learners-Led). Teaching Date: Sept. 1-4, 2020. Quarter 1. Time: 1-2 pm. No. of Days: 4.	The header is complete and follows the PIVOT 4A template, which supports curriculum mapping by making the learning area, level, and time frame explicit. As a suggestion, the four-day span carries only one MELC, so indicating how the single competency is distributed across the four days would strengthen the developmentally sequenced planning that PPST Domain 4 expects.
I. Objectives. At the end of the lesson, learners are expected to: (a) differentiate various models of communication; (b) explain the process of communication through elements involved; and (c) recognize the importance of models in understanding the communication process in everyday lives.	The objectives are clear and cover two domains, the cognitive (differentiate, explain) and the affective (recognize the importance). Measured against the SMART and three-domain guide points, two gaps stand out. First, there is no explicit psychomotor or performance objective, even though the Performance Standard asks learners to design and perform oral communication activities, so a 'demonstrate' or 'perform' objective would complete the KSAV set. Second, 'differentiate' and 'explain' reach the understanding and analyzing levels of the revised Bloom's taxonomy, which is good, but none reaches the creating level, so the objectives stop short of the higher-order thinking. The verbs are observable, yet no criterion

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

PHILIPPINE NORMAL UNIVERSITY
The National Center for Teacher Education
COLLEGE OF ALTERNATIVE AND LIFELONG LEARNING

call@pnu.edu.ph

	or condition is stated, so they are only partly measurable.
II. Content. Communication Models. III. Learning Resources: Learner's Material pp. 1-22; Module 2: Communication Models; optional online links to each model.	The content is appropriate for Grade 11 and aligns with the MELC, demonstrating sound content knowledge (PPST Domain 1). The resources rely almost entirely on a single self-learning module, which is realistic for modular distance learning, but the guide points to a variety of materials that cater to multiple intelligences. Adding a simple infographic of the models, along with an optional short audio or video clip, would serve visual and auditory learners without assuming stable internet access, since the links are optional.
IV-A. Introduction (What I need to know? / What's new?). Learners walk through the lesson expectations and objectives; answer prompt questions; read the short selection 'The Glitch' by Divina P. Maming, optionally acting out the dialogue with parents or housemates; then answer comprehension questions.	This is the strongest part of the plan. Opening with a literary selection and inviting family members into the dialogue supports motivation and schema activation and reflects a contextualized, Filipino-pedagogy sensitivity by turning the home into a learning space, which is exactly right for modular distance learning. It also quietly builds the social dimension of communication before the concept is named. One suggestion is to make the objective-setting explicit at this point, since introducing the objectives clearly is where this modality tends to be weakest and where the guide points look for clarity.
IV-B. Development (What I know? / What's in? / What is it?). A 15-item diagnostic on communication; a word-pool vocabulary task using context clues; then concept presentation on the communication models, with optional online links, and dictionaries or context clues to build understanding.	The move from a diagnostic to vocabulary to concept presentation is well-sequenced and reflects cognitivist information processing, building new knowledge on what the learner already knows. The diagnostic is a genuine formative check that the assessment guide identifies as valuable. The concept presentation is largely expository, which fits the direct teaching in the Unit 4 outline, but for a topic built on comparison, it leans heavily on reading alone. Introducing a guided graphic organizer here, rather than only later, would raise the cognitive demand and help learners actively construct the distinctions rather than receive them.
IV-C. Engagement (What's more? / What I can do? / Additional Activities). Learners complete a Venn diagram comparing models, vocabulary building, grid-filling on the elements of communication, and dialogue-response writing; then perform real-life tasks such as calling a friend or interviewing family members and reflecting on the process; plus enrichment tasks listing situations for each model.	This section is rich and varied, and it is where differentiation and multiple intelligences are best served. The Venn diagram supports visual and analytical learners, the calling and interviewing tasks serve interpersonal and kinesthetic learners, and the writing tasks serve linguistic learners, so the plan accommodates several learning styles even without naming them. The authentic tasks are the highlight, since they carry the concept into the learner's real communication life and satisfy the engagement phase well. A short rubric for the interview and dialogue outputs would make the expectations visible and give the learner

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

PHILIPPINE NORMAL UNIVERSITY
The National Center for Teacher Education
COLLEGE OF ALTERNATIVE AND LIFELONG LEARNING

Taft Ave. cor. Ayala Blvd., Ermita, Manila

(+63 2) 5317 1768 loc. 570/776

call@pnu.edu.ph

	something concrete to aim for, which the assessment guide specifically asks for.
IV-D. Assimilation (What I have learned? / What I can do? [Assessment]). Learners answer synthesizing questions relating the concept to their own lives, then answer an assessment whose answers they check against a key in the module.	The synthesis questions that ask learners to relate models to their own lives are a good higher-order move, pushing toward application and evaluation. The self-checked assessment with an answer key is appropriate for a learner-led modality and helps learners monitor their own progress. The limitation is that a fixed-answer key mostly measures recall and understanding, so it does not fully assess the 'differentiate' and 'recognize the importance' objectives. Adding one open-response item, scored using a short rubric, would more directly align the assessment with the higher-order and affective objectives.
V. Reflection. Learners write personal insights in a notebook, journal, or portfolio using the prompts 'I understand that ____' and 'I realize that ____'.	The reflection prompts are a strong close. They promote metacognition and let learners connect the lesson to their own lives, which supports retention and the values dimension the IDEA framework intends. As a refinement, adding a forward-looking prompt such as 'I will use this when ____' would turn reflection into transfer, nudging learners to apply communication models beyond the module and strengthening the recency effect that good closure depends on.
Overall design (IDEA instructional process, modular distance, learner-led).	Overall, this is a coherent, well-sequenced, and context-sensitive exemplar that genuinely fits a learner-led modality and would serve real Filipino learners with limited connectivity. Its clear strengths are the literary and family-based introduction, the authentic engagement tasks, and the reflective closure, all of which reflect sound constructivist and contextualized teaching. Its main areas for growth, measured against the rubric, are three: adding a psychomotor or performance objective to complete the KSAV set, raising the objectives and assessment toward higher-order and creating-level thinking, and providing simple rubrics so expectations and criteria are visible. Addressing these would move an already strong plan from good to excellent.

PART III. OUR COLLECTIVE REFLECTIONS/ INSIGHTS

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

1. What pedagogy/pedagogies you found commonly used in different learning areas in the different sections of the instructional plan such in the Preliminary Activity/Introduction, Developmental Activity, and Closure Activity ?
Across the sample exemplars, a few pedagogies recur in each phase of the lesson. In the Introduction, the common move is motivation and activation of prior knowledge, done through a hook such as a story, a current issue, or a guessing game, followed by clear objective-setting. In the Developmental phase, the exemplars lean on a blend of expository or interactive lecture to present concepts and constructivist tasks such as graphic organizers and guided practice that let learners process the content. In the Closure, the shared pattern is synthesis and reflection, usually an exit card or a journal prompt that asks learners to state what they learned and why it matters. What ties the three together is a constructivist and learner-centered spine, since even the direct-teaching moments are framed to connect new learning to what the learner already knows and to their own life.
2. What are the different factors in choosing or selecting teaching methods, approaches, strategies? Please describe briefly and give educational settings to support your answer.

Several factors shape the choice of method, and the exemplars show them plainly. The learners themselves come first, since their grade level, readiness, and diverse learning styles decide whether a concept is best met through a story, a diagram, or a hands-on task. The nature of the content matters next, because a comparison topic like communication models calls for a Venn diagram, while a historical topic like the Third Republic calls for a timeline. The learning environment is a third factor, and it weighs heavily here, since a modular distance class in a low-connectivity area rules out live discussion and pushes the teacher toward self-paced, print-friendly tasks. The objective is a fourth, because an affective goal is reached through reflection while a psychomotor goal needs demonstration and practice. Time and available resources set the final limits, since even the best

method fails if it cannot be finished in the period or supported by the materials at hand. In a rural public school, for instance, a teacher may want a video but choose a board drawing instead, not because it is better in theory but because it will actually reach every learner.

3. Why should teachers need to have a teaching repertoire? Give examples to support your answer.

A teacher needs a repertoire because no single method fits every learner, every topic, or every condition, and a teacher who knows only one way will fail the learners that way does not reach. A wide repertoire lets a teacher differentiate, offering a diagram to one learner and a role-play to another so that the same concept finds more than one door in. It also lets a teacher adapt when a plan meets reality, since a discussion designed for a stable connection has to become a printed task the day the internet fails. The exemplars show this range at work, moving from expository presentation, to cooperative tasks, to reflective writing within a single lesson. A teacher with only lecture in hand could not have built the authentic interview task or the family-based reading that made those plans effective. The deeper point is that a repertoire is what turns a teacher from a deliverer of content into a designer of learning, able to choose the method the moment actually needs rather than the only one they own.

4. How will you apply what you learned/insights into your group's Lesson Plan project especially in designing learning experiences in the different parts of the lesson such as the Preliminary Activity/Introduction, Developmental Activity, and Closure Activity?

These insights give our group a clear guide for our own lesson plan. In the Preliminary phase, we will open with a genuine hook and set the objectives plainly, following the way the exemplars used a story or a current issue to earn attention before naming

the target. In the Developmental phase, we will pair a clear presentation of the concept with an active task such as a graphic organizer or guided practice, so learners construct understanding rather than only receive it, and we will build in differentiation by offering more than one way to engage the same idea. In the Closure, we will use a synthesis and reflection task, an exit card, or a short journal prompt, to consolidate the learning and check it before the lesson ends. Above all, we will align our objectives, activities, and assessment so that all three point the same way, and we will prepare simple rubrics so our learners know what good work looks like. The main lesson we take from critiquing the exemplar is that a strong plan is intentional at every phase, and that even a good lesson improves when its objectives reach higher-order thinking and its expectations are made visible.

+++++

Some Guidelines for Consideration in Critiquing Instructional Plans

Below are some guide points which you may use in analyzing/critiquing the lesson exemplar your group has selected.

PART/COMPONENT	
Learning Objective/s	
Guide Points: ● Stated in SMART Way (Specific, Measurable, Attainable/Achievable, Relevant/Realistic and Time-bound)	

PHILIPPINE NORMAL UNIVERSITY
The National Center for Teacher Education
COLLEGE OF ALTERNATIVE AND LIFELONG LEARNING

Taft Ave. cor. Ayala Blvd., Ermita, Manila | (+63 2) 5317 1768 loc. 570/776 | call@pnu.edu.ph

● Reflective of the 3 Domains (Cognitive, Affective and Psychomotor if possible) ● Involves Higher Order Thinking	
II. Content/Topic	
● Appropriate to the grade level/ age	
III. Teaching Aids and Instructional Materials including Technology)	
Guide Points ● Aligned with learning objectives/content ● Appropriate and varied ● Caters to Multiple Intelligences ● Accommodates learning styles ● Use of books, picture ● Uses technology /digital media (videos, PPT, photos etc.) ● Uses Worksheet/Task sheet /Activity sheet	
IV. Pedagogy/ Methods/ Approaches/ Strategies/ Techniques	
Guide Points ● Aligned with learning objectives/content	

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

PHILIPPINE NORMAL UNIVERSITY

COLLEGE OF ALTERNATIVE AND LIFELONG LEARNING

Taft Ave. cor. Ayala Blvd., Ermita, Manila | (+63 2) 5317 1768 loc. 570/776 | call@pnu.edu.ph

● Appropriate and varied ● High cognitive demands ● Accommodates differentiation ● Uses technology/media ● Uses teaching aids/instructional materials ● Uses Worksheet/Task sheet /Activity sheet	
V. Assessment/Evaluation	
Guide Points ● Aligned directly with the learning objectives/content ● Indirect and direct/ formative/ and summative ● Reasonable (time for response, grading, methods) ● Varied questioning strategies ● Involves critical thinking skills higher order thinking ● Use of testing resources ● Uses technology ● Structured in a way to help students assess their own work and progress

- Uses criteria /scoring/marking system/Rubrics/rating scale

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

Please rate your group/team using the rubric presented below.

Rubric for Evaluating a Reflection								
Criteria		Levels of Performance				Ratings		
		10 <i>Outstanding</i>	7 <i>Proficient</i>	5 <i>Basic</i>	3 <i>Below Expectations</i>	Self 30%	Teacher 70%	Sub-total
Observations and Insights	50%	Thoughtful observation of details was evident. Synthesis has high degree of insightfulness and clearly connected to real-life situations or previous content.	Substantial details were noted. Insights were insightful and connected to real-life situations or previous content.	Details were noted. Insights were insightful and connected to real-life situations or previous content.	Very simple details were noted with very little or not insights, comments or analysis.			

PHILIPPINE NORMAL UNIVERSITY
The National Center for Teacher Education
COLLEGE OF ALTERNATIVE AND LIFELONG LEARNING

Taft Ave. cor. Ayala Blvd., Ermita, Manila | (+63 2) 5317 1768 | call@pnu.edu.ph

	Depth of Reflection	40%	Entries are evident of personal realizations and convictions to improve understanding of oneself and future performance.	Entries are evident of connections to real-life situations and possible actions to improve understanding of oneself and future performance.	Entries are evident of connections to real-life situations but very limited understanding that there are ways to improve of oneself and future performance.	Entries simply presented how the experience relate to real-life situations.			
	Promptness	10%	The Worksheet and Reflection were submitted before the agreed deadline.	The Worksheet and Reflection were submitted on the agreed deadline.	The Worksheet and Reflection were submitted 1 day after the agreed deadline.	The Worksheet and Reflection were submitted 2 or more days after the agreed deadline.			
	TOTAL	100%							
									Equivalent
