

2E-EDUC 3- PRINCIPLES AND METHODS OF TEACHING

Classroom Observation Tool for PNU FGEEL

August 10-14/August 17-21/August 24-28, 2026

Name of CTP Student: Kenn Arcenal
Degree Finished: BS Foreign Service, MA in TESOL
Currently Teaching: Starting September 2026
Date Submitted: August 22, 2026

Class Observation Profile

School/Institution: Quezon City Academy Foundation, Inc.
Date of Observation: August 18, 2026
Modality (Online or Onsite): Online
Time: N/A
Learning Area/Subject Observed: English (Literature)
Grade/Year Level: 9
No. of Students: Boys: 10 Girls: 10 Total: 20
Duration of Class: 90 minutes

Subject Matter/Topic: Exploring and Analyzing Invictus (a poem by William Ernest Henley)

Lesson Objectives:

1. Identify and explain the literary devices used in INVICTUS to find the meaning of the line/stanza.
2. Interpret the meaning of the poem through guided discussion.
3. Collaboratively share insights in creative and critical ways.
4. Relate the poem's message to personal and contemporary struggles.

Part I. Overview of Teaching-Learning Observations

Observe the teaching and learning episode and answer the following briefly:

Questions	Brief Significant Observations
1. How did the teacher implement the following? Please describe teaching strategies and/or techniques used.	
(A) Lesson Introduction/Preliminary	The class opened with the teacher's daily routine, a 'Speak-Up' activity that set an English-speaking climate, followed by the posting of the learning targets and success criteria so learners knew from the start what they were working toward. A short motivational lead-in and unlocking of key terms activated prior knowledge before the poem was introduced. The teacher then gave the background of 'Invictus' and its author, framing the poem's theme of resilience, which prepared learners for analysis.
(B) Lesson Development/Lesson Proper	The class was divided into four groups, each assigned one stanza to read, analyze, and answer guided questions on a task sheet, then represent the stanza's meaning through a symbolic illustration on Manila paper within a set time. The teacher moved from group to group giving hints and clues that helped learners analyze what each stanza was asking, rather than handing them the answer. Representatives presented their output, and the teacher added supplementary information and asked follow-up critical-thinking questions after each presentation. A short enrichment debate on whether people control their own fate deepened the engagement.

(C) Culmination/Closure	The lesson closed by bringing the poem back to the learners' own lives. Using the spotlight lines 'I am the master of my fate; I am the captain of my soul,' the teacher led an individual assessment asking learners to explain how the message applies to their studies, relationships, or future goals, to be completed in class or as an assignment. This consolidated the lesson's theme and moved it from analysis toward personal application.
2. How did the teacher communicate the lesson objectives?	The objectives were communicated clearly and early. The teacher posted the learning targets and the success criteria at the start of the lesson, stating them in learner-friendly 'At the end of the lesson, I can...' and 'I am able to...' language, so learners understood both the goal and the standard of a good response before the activities began.
3. What content/topic did the teacher develop in the lesson?	The content developed was the analysis of the poem 'Invictus' by William Ernest Henley: its literary devices such as imagery, metaphor, symbolism, and personification, the meaning of each stanza, and the poem's central message of resilience and self-mastery, which learners then related to real-life struggles.
4. What dominant teaching methods/ approaches/ did the teacher use? Please describe.	Collaborative and inquiry-based, built on guided group discussion and cooperative analysis of the poem. This was supported by moments of direct instruction when the teacher supplied background and clarified concepts, and by a short debate that added an argumentative, higher-order dimension. The overall flow moved from guided analysis, to collaborative output, to personal application.

5. What teaching style (s) did the teacher use?	Facilitative, learner-centered style, roaming among groups as a guide and questioner rather than lecturing throughout. This was balanced with expository moments for background and clarification. The style was interactive and encouraging, drawing learners into discussion and prompting them to defend and explain their thinking.
6. What instructional materials including technology were used by the teacher?	Instructional materials were varied and well-prepared: a PowerPoint with a clean, menu-guided design and large, readable text, animation and video to support engagement, printed information and task sheets for each group, and Manila paper and markers for the symbolic illustrations. A timer was displayed to manage the group work, and rubrics were shown so learners could see how their output would be judged.
7. How did the teacher assess the attainment of the lesson objectives?	Assessment was continuous and aligned to the objectives. The teacher checked understanding throughout the group work by questioning and giving hints, assessed the group output through presentations judged against a shown rubric, and used follow-up critical-thinking questions to gauge depth. A closing individual task asked learners to relate the poem's message to their own lives, providing evidence of both comprehension and personal application.

Signatures (If possible/if circumstances permit.)

- Teacher Observed: Mr. Vic Magara
- Course Professor/ Supervisor: Dr. Dominador Mangao

Date: August 18, 2026
Date: August 22, 2026

Part II. Significant Observations of the Teaching-Learning Episode

No	Indicators	Significant Observations/Comments
	The demonstration teacher . . .	
1	formulate lesson objectives that are directly related to Learning Competency based from the MATATAG Curriculum Guide of the subject	Yes. The lesson objectives were directly tied to the learning competency on analyzing a literary text and valuing others' circumstances. The targets were posted and pursued consistently, though they leaned mostly on the cognitive and affective domains.
2	integrate appropriately the new literacy/21st century skills/SDGs into the subject/topic	Yes. Collaboration ran through the group analysis, critical thinking through the stanza questions and the debate, and communication through the presentations, with technology used purposefully in the slides and video.
3	plan highly coherent activities and that has a clear structure and flow for the development of the topic and new literacy/21st century skills	Yes. Activities were coherent and clearly structured, moving from background, to guided group analysis, to presentation, to a personal-application assessment. Each step built on the previous one toward the lesson's message.
4	apply knowledge of content within and across curriculum teaching areas with integration of new literacy/21st century skills	Yes. The teacher showed clear mastery of the poem and its literary devices, and connected the analysis of one text to broader ideas of resilience and personal circumstance, which reflects strong content knowledge.
5	use varied and appropriate instructional materials and resources that support the lesson objectives and engage learners in meaningful learning for the development of the content and new literacy/21st century skills	Yes. Materials were varied and appropriate: prepared task and information sheets, Manila paper and markers for output, a rubric, a timer, and a well-designed slide deck with supporting video.
6	use appropriate information and communications technology (ICT) that enhance and support teaching and learning for the development of the content and the new	Yes. Technology was used purposefully. The slides were clean and readable with a side menu for navigation, and animation and video supported the

	literacy/21 st century skills	discussion rather than decorating it. As one refinement, the background music at times competed with the discussion.
7	use varied teaching strategies that enhance learner achievement of content and new literacy/21st century skills including 4Cs as well as other higher-order thinking skills in consideration with learners' needs, interests and experiences	Yes. Strategies were genuinely varied, combining guided discussion, cooperative group work, an enrichment debate, and individual reflective writing, which kept learners engaged in different ways.
8	manage classroom structure to engage learners, individually or in groups, in meaningful exploration, discovery and hands-on activities within a range of physical learning environments	Yes. The teacher managed both individual and group structures well. Groups had clear roles and prepared materials, and the pair-and-group format supported strong participation, though at times some groups kept working while another was presenting.
9	use effective verbal and non-verbal communication strategies to support learner understanding, participation, engagement and achievement	Yes, largely. The teacher used a clear, audible voice and purposeful questioning, circulating to give feedback. On occasion learners were pointed at rather than called by name, which is a small point for warmer address.
10	manage learner behavior constructively by applying positive and non-violent discipline to ensure learning focused environment	Yes. Behavior was managed positively and proactively through a displayed timer, verbal reminders of remaining time, gentle reminders to keep the noise down, and by drawing in learners who were not volunteering, so management supported rather than interrupted learning.
11	design and use varied and appropriate assessment /evaluation strategies consistent with lesson objectives with clear criteria and standards that show evidence of student contribution to their development.	Yes. Questioning reached higher-order levels. The teacher pressed learners to analyze each stanza with guiding hints, asked follow-up critical-thinking questions after presentations, and used the debate to push learners to justify a position.
12.	use questioning and discussion techniques which reflects high -level questions, true discussion, and full participation	Yes. Application and extension were clear. The enrichment debate extended the analysis, and the

	by all students.	closing task asked learners to relate the poem's message to their own academic, personal, or future struggles.
13	provide application /extension /reinforcement/enrichment activities to create/produce a project/ or performance to demonstrate acquired knowledge and skills of content and new literacy /21st century skills through well-defined agreement and established connection to next lesson.	Generally yes. A timer kept the group work on schedule and the phases were well paced. One area to watch is ensuring every group finishes before presentations begin, since a few were still completing output while others presented.
14	show good pacing of the lesson which provides students the time needed to intellectually engage with and reflect upon their learning and to consolidate their understanding,	Generally yes. A timer kept the group work on schedule and the phases were well paced. One area to watch is ensuring every group finishes before presentations begin, since a few were still completing output while others presented.
15	has a clear audible spoken language which conveys information and ideas clearly, pleasing personality and exudes energy and dynamism.	Yes. The teacher spoke in clear, audible English with good command of the language, conveying information and instructions understandably throughout.
16	show rapport, recognize and appreciate individual and/or group effort, participation and contribution that led to the success of the lesson.	Yes. Rapport was warm and encouraging. The teacher recognized group contributions, valued learners' insights, and used a collaborative topic that made the discussion lively, though inviting the quieter members, such as the learner holding the artwork, to share would deepen this further.

Note: This is a teacher-made observation tool drawn from various sources and is intended solely for this course.

Part III. A More Detailed Observations by Domains and Indicators

Domain A. Content Knowledge and Pedagogical Principles

(CHED: Professional Knowledge/PPST Domain 1

Indicators	Observation Notes
1. Teacher demonstrates mastery of subject matter.	Yes. The teacher showed clear command of 'Invictus,' its author's context, and its literary devices, and handled learners' questions with accuracy and confidence.
2. Concepts are presented accurately and clearly.	Yes. Literary devices such as imagery, metaphor, symbolism, and personification were explained clearly and illustrated with lines from the poem.
3. Teaching reflects sound principles of learning (e.g., motivation, readiness, reinforcement, etc.)	Yes. Sound learning principles were applied, including activating prior knowledge, guided discovery through hints rather than direct answers, cooperative meaning-making, and closing with personal application (constructivist and cognitivist foundations).
4. Instruction is appropriate to learners' level.	Yes. The text, tasks, and language were pitched appropriately for Grade 9, and the poem's theme of resilience was made accessible through group analysis and relatable examples.

Reflective Prompt: Which teaching principles were most evident in the lesson?

The principles most evident were that learners construct their own understanding and that the teacher scaffolds rather than tells. Learners built the poem's meaning themselves through cooperative stanza analysis while the teacher guided with hints, which reflects constructivist and guided-discovery thinking. A second principle, that new learning must connect to what learners already know, was clear in how the lesson activated prior knowledge and then moved learners toward relating the message to their own lives. A third, that learning should engage values and not only knowledge, showed in the valuing process, as the poem's theme of resilience led learners to value both others' circumstances and their own strength.

Domain B. Instructional Methods and Strategies

(CHED: Pedagogical Skills / PPST Domain 1 & 4)

Indicators	Observation Notes
1. Teaching method matches lesson objectives.	Yes. Guided discussion and cooperative analysis matched the objective of interpreting the poem and valuing others' circumstances, rather than simply lecturing on it.
2. Strategies are varied (lecture, discussion, inquiry, demonstration, etc.)	yes. The teacher combined guided discussion, vocabulary presentation, group work, an enrichment debate, and individual writing, showing a varied and well-chosen strategy set.
3. Teacher uses questioning to promote thinking.	Yes. Questioning was central, from stanza-analysis prompts and clues to follow-up critical-thinking questions and a debate that required learners to defend a stand.
4. Learners are actively engaged in learning tasks.	Yes. Learners were active throughout, analyzing stanzas, producing symbolic illustrations, presenting, debating, and reflecting individually.

Reflective Prompt: How effective were the chosen teaching methods in facilitating student learning?

The methods were highly effective because each one matched the demand of interpreting a poem and kept learners active. Cooperative analysis distributed the thinking across the group and let learners test their interpretations against one another, thus meaning was reached together rather than received, while the symbolic illustration turned an abstract stanza into something concrete and gave visual and creative learners a way in. Moreover, the guided discovery, through the teacher's hints instead of answers, kept the cognitive work with the learners and built their confidence to analyze on their own. The short debate pushed them from understanding toward evaluation and argument, which is higher-order thinking, and the closing reflection carried the message into their own lives, securing both retention and the valuing of the lesson aimed for. Thus, the varied methods also reached different kinds of learners and built the collaboration and critical thinking that make a lesson effective beyond mere coverage. The main refinement would be ensuring every group attends to each presenter, since a few kept working while others presented, which slightly weakened the shared learning the group method was meant to create.

Domain C. Curriculum Alignment and Lesson Structure (CHED; Curriculum Competence / PPST Domain 4)

Indicators	Observation Notes
1. Lesson objectives are aligned with K-12 Curriculum Guide/MATATAG Curriculum Guide.	Yes, within the school's context. The objectives align with the K-12 English competency on analyzing literary texts. At the time of this observation, this private school had not yet adopted the MATATAG Curriculum, so the lesson followed the school's own competency-based learning plan aligned to K-12 American Literature.
2. Lesson sequence (scaffolding the order of topics) is logical and coherent.	Yes. The sequence scaffolded logically from background, to vocabulary learning, to guided stanza analysis, to presentation, to a personal-application task, each stage preparing the next.
3. Learning activities support the attainment of learning objectives.	Yes. Every activity, from the task-sheet analysis to the debate and the closing reflection, supported attainment of the objective of interpreting and valuing the poem's message.
4. Instruction connects to real-life or local contexts.	Yes. The lesson connected strongly to real life, closing by asking learners to apply the poem's message of self-mastery to their own studies, relationships, and future goals.

Reflective Prompt: How does the lesson design support meaningful learning?

The design supported meaningful learning through its coherent sequence, not a set of separate tasks, moving from the poem's background, to guided stanza analysis, to group output, and finally to personal application. Each stage prepared the next, and in this way learners were not asked to analyze before their prior knowledge was activated, nor to apply the message before they had understood it. This scaffolding reflects sound curriculum sequencing, as the lesson advanced from the concrete and known toward the more abstract and demanding. What made the learning meaningful instead of merely covered was the closing move, where learners related 'the master of my fate' to their own studies and struggles, turning analysis into transfer and anchoring the poem's message to their own experience. By connecting the text to learners' lives, the lesson made the knowledge more likely to last beyond the period, which is the real test of meaningful learning.

Domain D. Learner Engagement & Diversity

(CHED: Learner-Centered Teaching / PPST Domain 3)

Indicators	Observation Notes
1. Learners participate actively.	Yes. Learners participated actively in group analysis, presentations, and the debate, with most groups visibly engaged in the tasks.
2. Instruction considers learner diversity.	Partly yes. The group format and varied tasks (analysis, illustration, debate, writing) offered several ways to engage, though explicit differentiation for varied readiness was not distinctly observed.
3. Teacher encourages collaboration and interaction between and among learners and small group of learners.	Yes. Collaboration was central, with pair and group activities that the learners clearly responded to and that made the discussion lively.
4. Learners demonstrate understanding during the lesson.	yes. Learners demonstrated understanding through their stanza interpretations, symbolic illustrations, presentations, and responses to follow-up questions.

Reflective Prompt: How does the teacher address differences among learners?

Differences among learners were addressed mainly through varied tasks and mixed grouping. Offering the same poem through both written analysis and symbolic illustration gave learners more than one way in, so a learner who struggled with written interpretation could still show understanding through the symbolic illustration, while the debate suited those who think best while speaking. This variety quietly served different learning styles and multiple intelligences without singling anyone out. Mixed-ability grouping was another main strategy, letting stronger learners guide weaker ones and turning peer support into a form of differentiation. Less visible was deliberate differentiation by readiness, such as tiered tasks or targeted prompts, and some quieter members stayed on the margins of the group work. Inviting those learners to share and adjusting the demand for those who needed more challenge or more support would make inclusion more intentional and better reach the diversity of learners.

Domain E. Assessment & Feedback

(CHED: Assessment Literacy / PPST Domain 5)

Indicators	Observation Notes
1. Teacher checks for understanding during the lesson.	yes. The teacher checked understanding continuously by circulating, giving hints, and asking questions during group work.
2. Assessment methods align with lesson objectives.	Yes. Assessment aligned with the objectives, since the rubric-judged group output and the closing personal-application task both measured interpretation and valuing of the poem.
3. Feedback is timely and constructive.	Yes. Feedback was timely, given during group work and after each presentation, though it was mostly oral and group-directed.
4. Learners are informed of performance expectations.	Yes. Learners were informed of expectations, as the success criteria and rubric were shown before the activity, so learners knew the standard for a good output.

Reflective Prompt: How does assessment support learning rather than merely measure it?

Mostly formative assessment. Throughout the group work, the teacher checked understanding by questioning and giving hints, which is assessment as it happens, catching misunderstandings while there was still time to correct them. Showing the rubric before the activity made the standard for a good output visible from the start, so learners could aim for it while they worked, turning the rubric into a guide for learning and not only a tool for scoring. The closing personal-application task, where learners related the poem's message to their own struggles, surfaced how deeply the meaning was understood and opened it up for discussion, which is assessment feeding directly back into learning. One limit was that feedback stayed mostly oral and group-directed, which meant individual learners received less personal guidance. Even so, the overall design reflected assessment for learning that treats evidence of understanding as something to act on during the lesson and not merely to record at the end.

Domain F. Classroom Management & Learning Environment

(CHED: Professional Practice / PPST Domain 2)

Indicators	Objective Evidence/Observation Notes
1. Classroom routines are well-established.	Yes. Routines were well-established, opening with the regular 'Speak-Up' activity and clear activity instructions and time limits.
2. Teacher manages behavior positively.	Generally yes. Behavior was managed positively through verbal time reminders, gentle noise reminders, and drawing in non-volunteering learners rather than through correction. However, during the group presentation, some groups kept working on their presentations while other groups presented.
3. Learning environment is respectful and inclusive.	Generally yes. The environment was respectful and collaborative, and the poem's theme naturally invited positive values and mutual respect among learners, but the teacher's pointing instead of calling the student by name was noticeable.
4. Instructional time is maximized.	Generally yes. The strict timing kept the group work on track and pacing was good, with the minor exception that presentations sometimes began before every group had finished.

Reflective Prompt: How does classroom management support effective instruction ?

Clear routines and proper time tracking gave the lesson a predictable structure. Because of this, learners knew what to do and instructional time went to learning and not to settling the class. Behavior was handled through relationship, with gentle reminders and by drawing in quiet learners, which kept the collaborative tasks moving without breaking their flow. Two small management gaps did touch the instruction, though. Some groups kept working while another presented. This cost the presenters the shared attention the activity depended on, and the teacher's pointing to a learner instead of using their name slightly weakened the personal rapport that makes management feel respectful. Overall, the management supported instruction well, and tightening these two points would help every minute and every learner be fully drawn into the lesson.

Domain G. Values Integration & Professional Ethics

(CHED: Ethical Practice / PPST Domain 6)

Indicators	Objective Evidence/Observation Notes
1. Teacher models professionalism and ethical conduct.	Yes. The teacher modeled professionalism through preparation, organized delivery, and command of the language and subject.
2. DepEd Core Values (Maka-Diyos/Maka-tao, Makakalikasan and Makabansa) are evident in practice.	Yes. DepEd Core Values surfaced in the lesson's valuing process, as learners were led to value other people and their circumstances (Maka-tao), consistent with the poem's message.
3. QCA's Vision and Mission are evident in practice.	Yes. The lesson reflected QCA's vision and mission. The group discussion, illustration, and presentation built the effective and creative communication its vision aims for, while the poem's theme of resilience enhanced moral values and the guided analysis developed critical thinking, as its mission intends. The use of a well-designed deck with video also showed the school's technology orientation.
4. There is a rapport and respectful teacher-learner interaction.	Yes. Rapport was warm and encouraging, and the collaborative topic made interaction lively, though inviting quieter learners to speak would strengthen it further.
5. Teacher demonstrates commitment and dedication to teaching.	Yes. The careful preparation of task sheets, rubrics, timer, and a well-designed deck reflects clear commitment and dedication to teaching.

Reflective Prompt: How are values and professionalism reflected in teaching practice?

The clearest sign of values in practice was that the teacher trusted the learners to think. Instead of handing over each stanza's meaning, he gave clues and asked why they thought as they did, which treated every learner as capable of arriving at understanding. Fairness showed in how openly he worked, presenting the rubric and the success criteria before the task so no one was judged by a hidden standard, and in the way he drew in learners who were not raising their hands rather than letting the same few speak. His professionalism and genuine care for the learners were visible, moving from group to group to give feedback while they worked and keeping the room orderly without harshness. The choice of 'Invictus' itself as well carried a value, since a lesson on staying unbroken through hardship quietly teaches character alongside literary analysis. In these concrete ways, the practice matched what Quezon City Academy sets out to form from their learners.

Note: The indicators are AI-generated and solely for the purpose of this course.

Part III. Reflections:

Please answer the following questions with brief and concise response.

1. Over-all, how would you describe the teaching-learning episode you observed? What are the strong areas/ strategies or techniques which you think is a good practice?

Mr. Magara's literary class was a well-planned, learner-centered, and skillfully delivered class that turned the analysis of a single poem into a genuine experience of resilience and self-worth. Its clear strengths were strong preparation, cooperative stanza analysis paired with symbolic illustration, the use of a rubric to make expectations and pacing visible, and a closing task that connected the poem to learners' own lives. The teacher's mastery of the material, clear and audible voice, purposeful questioning, and warm encouragement of participation stood out as good practices worth emulating.

2. Which of the indicators do you think is/are most challenging to you? Please explain briefly.

The indicators I would find most challenging are those under learner diversity and differentiated instruction (Domain D) and the assessment-and-feedback expectations around individual feedback (Domain E). Reaching learners of very different readiness within one lively group activity, and giving each learner timely individual feedback rather than mostly group-directed feedback, are demanding, and honestly, they are the areas I most want to strengthen given my still-developing classroom experience.

3. What words of advice would you give to a new teacher regarding the following areas?

(a) lesson planning

State the objectives and success criteria plainly and post them early, then make sure every activity and assessment traces back to them. Sequence the lesson from the known toward the new, and prepare the support materials before the class rather than during it. A clear, complete lesson plan on paper frees the teacher to focus on the learners in the room. Also, make sure to have differentiated instructions for all different learning styles addressed.

(b) conducting a demonstration lesson

Prepare and rehearse everything, and let the learners do the thinking rather than filling every silence yourself. Guide with hints and questions instead of handing over answers, keep the technology in a supporting role so background music or effects do not compete with the discussion, and manage time visibly. Close with evidence that the objective was met, ideally by having learners connect the lesson to their own lives.

(c) observing a lesson demonstration

Observe with specific lenses and clear goals instead of a general impression. Always look for how objectives, activities, and assessments align; how learners are engaged; and how the teacher checks understanding. Compare what was planned against what actually happens in the room, note the small management moves that keep a lesson running, and observe to learn for your own practice rather than only to judge.

4. What insights did you gain from this lesson observation experience in relation to the course - Principles and Methods of Teaching?

This observation made the course ideas concrete. I saw constructive alignment, guided discovery, cooperative learning, and assessment-for-learning working together in a real classroom, and I saw how a well-chosen literary text can carry both critical thinking and values at once. It reinforced my belief that good teaching is intentional design, knowing the objective, choosing methods and materials that fit it, and checking honestly whether learning happened. It also reminded me that even a strong, high-scoring lesson still has room to grow, in this case through fuller differentiation and by ensuring every learner is drawn in, which is exactly the reflective, ever-improving stance this course encourages.
