

2E-Educ-3 PRINCIPLES AND METHODS OF TEACHING

Term 1 – AY 2026-2027

Worksheet #4 – My Teaching Style Self-Evaluation and Reflection

What is your dominant teaching style? Accomplish the following Teaching Style Self-Evaluation to find out. [Adapted and used with permission from Jennifer Stein (2001)]

This assessment will help you determine your teaching style. Answer the following questions by placing a check mark (/) on the space before the letter that corresponds to your answer. You are allowed to choose only one answer for each question.

1. What do you think of your teaching style?

- ☐ a. It may lead to an inflexibility for managing the concerns of students.
- ☐ b. It may cause students to feel inadequate when they can't emulate your example.
- ☒ c. It works well for most students but is very time-consuming.
- ☐ d. It may leave students feeling anxious about their ability to meet your expectations.

2. Which of the following do you like to use when evaluating student-learning?

- ☐ a. teacher-made tests
- ☐ b. student self-assessment tests
- ☒ c. performance-based criteria
- ☐ d. problem-solving and critical thinking

3. When planning lessons, what do you prefer to have?

- ☐ a. whole class lessons
- ☐ b. role-playing
- ☒ c. peer-tutoring
- ☐ d. brainstorming

4. When you teach, your instructional time predominantly involves -

____ a. lectures

____ b. demonstrations

____ c. films/videos

X d. class discussion/brainstorming

5. You believe in teaching by -

____ a. being the source of information

____ b. personal example and modelling behavior

____ c. emphasizing student-teacher interactions

X d. being a resource person as needed by the student

6. One of your goals is to have your student -

____ a. work within the learning plan

____ b. observe and emulate what was observed

X c. work independently and under his/her own initiative, while you provide as much support and encouragement as possible.

____ d. able to work in an autonomous manner while you serve as a resource person available upon request.

7. One advantage of your teaching style is that it -

____ a. focuses on clear expectations

____ b. emphasizes direct observation

____ c. allows students personal flexibility

X d. helps students see themselves as independent learners.

8. Assignments given to students are usually based on -

____ a. your personal preferences or on course materials you define as relevant and important for students to learn

X b. a sequence of steps leading to mastery of accepted method (steps) for performing a task or skill

____ c. a student portfolio or learning log which has a self-assessment component

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

____d. problem-solving based on research of course material

9. Your teaching style develops a rhythm which contains -

____a. Four steps: content selection, presentation/reception, reflection, application

____b. Three steps: selection, skill development, mastery performance

X c. Five steps: creating awareness, collecting data, choosing innovation, implementing a plan, reviewing results

____d. More steps: ranging from posing and reflecting on a problem, skill development exercises to interim evaluation, learner responses, and development of solutions.

What is your dominant teaching style?

Count the number of times you checked each letter and write the frequency counts on the table below. Each letter corresponds to a teaching style. A is for the formal authority teaching style, B is for the demonstrator or personal model teaching style, C for facilitator teaching style, and D for the delegator teaching style.

Teaching Style	Number of Check Marks
A (Formal Authority)	0
B (Demonstrator or Personal Model)	1
C (Facilitator)	5
D (Delegator)	3

Interpretation

If you have the most number of check marks on A, you have a formal authority teaching style; if you have more check marks on B, then you are practicing demonstrator or personal model teaching style; if you have more check marks on C, your teaching style is that of facilitator; and if you have more check marks on D, you are a delegator in terms of teaching style.

Questions:

1. What is your dominant teaching style? What can you say about the practices of your dominant teaching style? Do you agree? Why? Why not?

My dominant teaching style is the facilitator, with the delegator style following close behind and a single mark under the demonstrator. Both of my leading styles are student-centered, and both cast the teacher as a “guide on the side”, which is a fair picture of how I actually handle my classes. As a facilitator, I lean on collaboration and problem solving,

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

design activities that require learners to process and apply ideas in their own way, and place much of the responsibility for meeting a task on the learners themselves and only stepping in as a resource when they need one or when I sense that they're stuck in an activity instead of controlling the flow of content. The delegator streak shows whenever I hand learners genuine ownership of a larger piece of work and move into a consultative role, trusting them to manage their own progress. Seeing the check marks gather this way did not surprise me, but it did clarify something I had practiced more by instinct than by name.

I agree with the result, and I agree with it gladly, because it names the very thing I most want my teaching to accomplish. My deeper aim has always been to form learners who are self-aware and able to stand on their own, and the facilitator style is built for exactly that, since it develops independence by making learners think and choose rather than wait to be told. This also fits the philosophy I hold, that a learner is a free person who must be helped to author their own understanding, and that education should hand power back to the learner. I am honest, though, about the caution the assessment itself raises, that the facilitator style works well for most students but is very time-consuming. I have felt that cost in practice, because guiding learners to discover an idea takes far longer than simply telling it to them, and not every learner is instantly comfortable with the independence it asks for, and the success of the facilitation primarily depends on so many factors. I accept the trade because the gain is worth it. A learner who has worked an idea out for themselves owns it in a way that a learner who was handed the answer never will, and that ownership, more than any single lesson, is what I am really trying to teach.

2. Is it possible for a teacher to be using two or more teaching styles? Please explain and give examples.

Yes, a teacher can and should use two or more teaching styles, and in truth the most effective teachers rarely stay within just one. No single class, topic, or group of learners is the same, and the style a moment calls for depends on who is in front of the teacher, what is being taught, and where the learners are. A style held rigidly, however good, would fail the classes it does not happen to fit, which is why flexibility matters more than loyalty to one approach.

For example, when I introduce a new skill to my students, I step into the demonstrator role and model it first, because discovery has to begin from somewhere and learners cannot explore a method they have never seen. Once they have the basics, I move back into the facilitator role and set a group task that pushes them to apply and question the skill on their own, turning my demonstration into their practice. For a larger output, such as a research paper or a performance project, I take the delegator role, giving learners real

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

ownership of the design while I remain available as a consultant they can call on. Even a short lesson can move through more than one style within a single period. This is what the reading calls the all-round and adaptable teacher, and it rests on the same conviction that a teacher needs a wide repertoire, so that the method can be chosen to fit the learner rather than the learner forced to fit the method. The point is not to abandon a dominant style but to hold it lightly enough to reach for another when the learners in the room need it.

My Reflections:

Briefly share your insights about this activity and the impact it had created on you.

Seeing my check marks gather under the facilitator style confirmed that my instinct to guide rather than dictate is not a lack of authority but a deliberate way of teaching, and that was reassuring. What struck me most is that the exercise asked me to do for myself exactly what I try to do for my learners, to become self-aware. Naming my own style, including its time cost, is part of the metacognition and self-knowledge I hope to cultivate in the classroom, and it reminded me that a teacher who wants independent, reflective learners has to model that reflection first. The activity also kept me humble, since knowing my dominant style is a strength only if I remember its blind spots and keep stretching toward the styles that do not come as naturally. In the end, it left me more intentional, more aware of why I teach the way I do, and more committed to growing a wider teaching repertoire that a good teacher needs.

Teaching Style Categories

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

As you have learned in the activity above, there are four teaching style categories: formal authority, demonstrator, facilitator, and delegator. Let us get to know more about each one based on the work of Stein, Steeves, & Mitsuhashi (2001).

Formal Authority

Teachers who have a formal authority teaching style tend to focus on content. This style is generally teacher-centered, where the teacher feels responsible for providing and controlling the flow of the content and the student is expected to receive the content.

One type of statement made by an instructor with this teaching style is “I am the flashlight for my students, I illuminate the content and materials so that my students can see the importance of the material and appreciate the discipline.” Teachers with this teaching style are not so much concerned with building relationships with their students or enabling students to form relationships with other students. This type of teacher doesn’t usually

require much student participation in class. This teaching style is often called the “Sage on the stage” model.

Demonstrator or Personal Model

Teachers who have a demonstrator or personal model teaching style tend to run teacher-centered classes with an emphasis on demonstration and modelling. This type of teacher acts as a role model by demonstrating skills and processes and then as a coach/guide in helping students develop and apply these skills and knowledge; thus, the teacher is called a “Guide on the side.”

A teacher with this type of teaching style might comment: “I show my students how to do a task properly or work through a problem and then I’ll help them master the task or problem solution. It’s important that my students can solve similar problems independently by using and adapting demonstrated methods.

Instructors with this teaching style are interested in encouraging student participation and adapting their presentation to include various learning styles. Students are expected to take some responsibility for learning what they need to know and for asking for help when they don’t understand something.

Facilitator

Teachers who have a facilitator model teaching style tend to focus on activities. This teaching style emphasizes student-centered learning and there is much more responsibility placed on the students to take the initiative for meeting the demands of various learning tasks.

This type of teaching style works best for students who are comfortable with independent learning and who can actively participate and collaborate with other students.

Teachers typically design group activities that necessitate active learning, student-to-student collaboration, and problem solving. This type of teacher, who is also a “Guide on the side” like the demonstrator, will often try to design learning situations and activities that require student processing and application of course content in creative and original ways.

Delegator

Teachers who have a delegator teaching style tend to place much control and responsibility for learning on individuals or groups of students.

This type of teacher, who is also a “Guide on the side,” will often give students a choice in designing and implementing their own complex learning projects and will act in a consultative role. Students are often asked to work independently or in groups and must

be able to maintain motivation and focus for complex projects. Students working in this type of setting learn more than just course specific topics as they also must be able to work effectively in group situations and manage various interpersonal roles.

The All-Round Flexible and Adaptable Teacher

Given the four teaching style categories, is it possible for a teacher to be using two or more teaching styles? The answer is YES. Such a teacher is called the “All-Round Flexible and Adaptable Teacher”. Mohanna, Chambers, & Wall (2008) describe this teacher as one who “can use lots of different skills, can teach both peers and juniors, and is very aware of the whole environment in relation to teaching and the learners.”

(All documents without the PNU QM Stamp or Control Identifier are uncontrolled)

The all-round flexible and adaptable teacher is an effective teacher who can adapt to any of the four teaching styles depending on the subject matter and other variables. This implies that as an instructional leader, you need to help your teachers learn and appreciate the different teaching styles and adopt two or more for their teaching repertoire. But before you can do this, you will need to assist them in finding out their own teaching styles.

Teaching Techniques That Will Benefit All Learners

Although not all your teachers may be the all-around flexible and adaptable teacher type, you can help them meet the needs of all the students in any class by asking them to include several, if not all, of the following techniques (Engineering, 2009).

- Motivate learning by relating the material being presented to what has come before and what is still to come in the same class subject, to material in other subjects, and particularly to the students' personal experience.
- Provide a balance of concrete information (facts, data, real experiments, and their results) and abstract concepts (principles, theories, and mathematical models).
- Balance problem-solving methods with simple knowledge-level methods.
- Use pictures, schematics, graphs, and simple sketches liberally before, during, and after the presentation of verbal material. If possible, show films or provide demonstrations and hands-on activities.
- Use technology-assisted instruction, if possible.
- Do not fill every minute of class time lecturing and writing on the board. Provide intervals - however brief - for students to think about what they have been told.
- Provide opportunities for students to do something active besides writing notes. Small-group brainstorming activities that take no more than five minutes are extremely effective for this purpose.
- Assign some drill exercises but do not overdo them. Also provide some open-ended problems and exercises that call for analysis and synthesis

Give students the option of cooperating on homework assignments to the greatest possible extent.

- Applaud creative solutions, even incorrect ones.
- Talk to students about learning styles to reassure them that their academic difficulties may not all be due to personal inadequacies.

Explaining to learners how they learn most efficiently may be an important step in helping them reshape their learning experiences so that they can be successful
