**2E-EDUC 3 – PRINCIPLES AND METHODS OF TEACHING**

**TERM 1 AY 2026-2027**

**Worksheet 2 – Definition, Types of Curriculum, Role of Teacher as Curricularist and  
PPST Competency Domain 4**

Name: Kenn Arcenal

Degree (while in College): BS Foreign Service

Date Submitted: July 19, 2026

- **A1. My ACROSTICS for Important Educational Terms.** Think of an idea or an educational term for each letter that relates to your initial personal understanding of the following terms. Be creative. You may present in prose/poetry, etc.
- An acrostic is a poem or other word composition in which the first letter of each new line spells out a word, message or the alphabet. The term comes from the French *acrostiche* from post-classical Latin *acrostichis*, from Koine Greek ἀκροστιχίς, from Ancient Greek ἄκρος "*highest, topmost*" and στίχος "*verse*". (Wikipedia)

**1) CURRICULUM**

**C** = Content I must choose, because I cannot teach everything and pretending otherwise means my learners master nothing.

**U** = Unpacked from a competency into something a learner can actually reach in one period.

**R** = Responsive to the learners in front of me, not the class I imagined while planning.

**R** = Rooted in the community, so a lesson written in Manila should not sound the same in Tawi-Tawi.

**I** = Inclusive of every learner, including the ones I still find hardest to reach.

**C** = Cyclical, never finished, always revised after it meets a real class.

**U** = Understanding is the point, not coverage. Finishing the syllabus is not the same as teaching it.

**L** = Language runs through all of it. My learners move between Mother Tongue, Filipino and English in a single lesson.

**U** = Unwritten, sometimes. The hidden curriculum often teaches the loudest lesson in the room.

call@pnu.edu.ph

**M** = Made by teachers, as Taba argued, because we are the ones who actually see the learners.

## 2) TEACHING

**T** = Transfer is the real test. If they can only repeat it back, I have measured memory, not learning.

**E** = Evidence before activity. Decide what proves learning before deciding what fills the period.

**A** = Alignment of outcome, activity and assessment, because learners quietly follow the assessment.

**C** = Curiosity, which I have to model before I can ask for it.

**H** = Humility. My own PPST self-assessment was not flattering, and that is where growth started.

**I** = Intentional, never improvised. Where resources are scarce, design is the resource that remains.

**N** = Nobody learns from what I said. They learn from what they were made to do.

**G** = Growth, theirs and mine, and neither one ever finishes.

## 3) METHODS

**M** = Match the method to the verb in the objective. If it says analyze, a lecture will not do.

**E** = Engagement is designed, not hoped for.

**T** = Toolkit, not a single trick. A teacher with one style teaches every objective as if it suited that style.

**H** = Higher-order thinking has to be planned deliberately or the day will quietly settle at recall.

**O** = Options for how learners show me what they know, because writing is a barrier when the outcome is not writing.

**D** = Differentiated, which I know matters and cannot yet claim to practice fully, especially for learners with special needs.

**S** = Strategy chosen for the learner's benefit, not for my convenience.

**2. Briefly write down your initial conceptual understanding and/or definition for the following educational terms after reading some articles and/or references:**

### a) Curriculum

For me, curriculum is the total learning experience a school plans and delivers, not merely the list of subjects or the guide sitting in a folder. It exists at several levels at once, from what DepEd recommends, to what is written in the guide, to what I actually teach, to what learners genuinely walk away with. Teaching English across pre-school to professional learners has convinced me that the gap between the written curriculum and the learned curriculum is where the real work of teaching happens.

### b) Teaching

Teaching is the deliberate design of conditions in which learning becomes likely. It is not simply telling. Learners construct meaning through what they do rather than through what they are told, so the teacher's task is to arrange what learners do, then look for honest evidence of whether it actually worked.

### c) Methods

A method is the overall procedure or systematic way of delivering a lesson, sitting between the broad philosophy of an approach and the moment-to-moment moves of a technique. Direct instruction, demonstration, inquiry-based learning and cooperative learning are methods. The professional skill is having enough range to match the method to the objective.

### d) Approach

An approach is the set of beliefs and assumptions about how language and learning work, from which methods follow. It is the philosophical level. In my own field, a communicative approach assumes language is learned through meaningful use, while a structural approach assumes it is learned through mastery of forms. The approach quietly determines everything downstream.

### e) Strategy

A strategy is the planned course of action a teacher chooses to reach a specific objective within a method, and it can also describe what learners themselves do to learn. Differentiated instruction, scaffolding, and think-pair-share are strategies. A strategy is chosen; a method is adopted.

### f) Technique

A technique is the specific, concrete classroom move that implements the strategy in real time. It is the smallest unit and the most visible one, such as an exit card, a gallery walk, a question stem, or a learner explaining a concept to a partner in the Mother Tongue. Techniques are where a plan finally meets a learner.

## A. Types of Curricula

Matching Type. Match Column A. with Column B. Identify the type of curriculum in Column A described in Column B. Write the letter in the Answer column.

| Answer   | Column A                   | Column B                                                                                                                                                                                                                                                            |
|----------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>G</b> | Recommended curriculum     | A. The positive outcome of teaching is an indicator of learning. These are measured by tools in assessment, which can indicate the cognitive, affective and psychomotor outcomes                                                                                    |
| <b>E</b> | Written curriculum         | B. These include print materials like books, charts, posters, worksheets, or non-print materials like PowerPoint presentation, movies, slides, models, realias, mock-ups and other electronic illustrations as well as facilities for formal and informal learning. |
| <b>F</b> | Taught curriculum          | C. In the process of teaching and at the end of every lesson or teaching episode, an assessment is made to ascertain learning progress.                                                                                                                             |
| <b>B</b> | Supported curriculum       | D. This curriculum is not deliberately planned, but has a great impact on the behavior of the learner                                                                                                                                                               |
| <b>C</b> | Assessed curriculum        | E. They come in the form of course of study, syllabi, modules, books or instructional /teaching guides among others.                                                                                                                                                |
| <b>A</b> | Learned curriculum         | F. This curriculum depends largely on the teaching style of the teacher and the learning style of the learners with the aid of instructional materials and facilities.                                                                                              |
| <b>D</b> | Hidden/Implicit curriculum | G. This curriculum comes in the form of memoranda or policies, standards, and guidelines from DepEd, CHED, TESDA and UNESCO.                                                                                                                                        |

**B. Role of Teacher as Curricularist**

Identify the role of the Teacher as a Curricularist ( i.e. Knower, Writer, Planner, Initiator, Innovator, Implementor, Evaluator ) as described in each of the statements below. Write your answer on the blank space before each statement.

| Role               | Cases                                                                                                                                                                                                                                                                                       |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Writer</b>      | 1. I need a poem to celebrate the World Teachers' Day. I composed one to be used in my class in Literature.                                                                                                                                                                                 |
| <b>Innovator</b>   | 2. I have a good idea on how to make my learners pay attention to the lesson. I will use the new idea and find out if it will work.                                                                                                                                                         |
| <b>Implementer</b> | 3. My class is composed of learners from different home backgrounds and culture. I cannot use a “one-size-fits-all” strategy in teaching so I can respond to the diverse background. In my readings, I discovered that there are ways of teaching. I tried one myself and it worked.        |
| <b>Planner</b>     | 4. There is so much to do in one school day. I seem not able to do all, but I have to accomplish something for my learners. I have made a daily activity plan to guide me.                                                                                                                  |
| <b>Knower</b>      | 5. Knowledge is limitless. What I learned in college is not enough. I need to know more, so I enrolled in the graduate school to advance my learning.                                                                                                                                       |
| <b>Evaluator</b>   | 6. At the end of the year, my performance as a teacher is reflected in the school performance of my students. So I need to provide a monitoring tool to measure how they are progressing. The result will inform me how I will address my learners' weaknesses and enhance their strengths. |
| <b>Initiator</b>   | 7. DepEd sent the standards, competencies and guidelines in Teaching the Mother Tongue in Grade 1 in our school. I will study and use it in the coming school year.                                                                                                                         |
| <b>Writer</b>      | 8. My principal asked me to attend a writeshop to make the lesson exemplars in the teaching of science in Grade 8. In the writeshop, I used my experiences as a science teacher for 10 years, and my knowledge of the subject matter to produce the lesson exemplars.                       |
| <b>Innovator</b>   | 9. I am teaching in a very far away barangay with no                                                                                                                                                                                                                                        |

| Role          | Cases                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | electricity yet. Many of the instructional aides for teaching sent to our school were films and video tapes which need power. I cannot use them, but the lessons are very important. So I thought of making an alternative activity. I took my class to the river and forest instead of doing the lesson.                                                                                |
| <b>Knower</b> | 10. In Grades 7 to 10 of the K-12 Enhanced Curriculum, science as a subject is presented, taught and learned in a spiral manner. I am a Biology major, and I have insufficient knowledge about the other areas of science such as Physics, Chemistry and Earth Science. Because of this dilemma, I have to request the principal that we do team teaching. Which role am I trying to do? |

### C. Reflection

- From the many roles of the teacher as curricularist, which role do think would be most challenging as you imagine it to be? Why do you say so? Please explain.  
(Note: You may relate also to the types of curriculum as support for your answer.)

Of all the roles, I find the Planner the most challenging, and I say so from an honest reading of my own experience. I have taught English formally and informally across levels ranging from pre-school to professional learners, so I am comfortable as a Knower. My subject knowledge is the part of my practice I trust most. Planning is different. It asks me to translate a broad competency into a developmentally sequenced set of lessons that fit a real school calendar, with real interruptions, for a real class I have diagnosed rather than imagined. My limited formal classroom experience shows most clearly here.

The types of curriculum help me explain why. The recommended and written curricula arrive already prepared, in the form of DepEd guidelines and curriculum guides. The Planner is the person who has to carry them across into the taught curriculum, deciding scope, sequence, pacing and resources along the way. That crossing is where plans usually break. I can also see the risk in the assessed and learned curricula: if I plan poorly, what I assess drifts away from what I intended, and what learners actually take away drifts further still. The hidden curriculum makes it sharper. A rushed, overloaded plan teaches learners that coverage matters more than understanding, and that lesson sticks long after the content is forgotten.

I would add that the Planner role is challenging precisely because it looks like paperwork. It is easy to treat the Daily Lesson Log as a form to be completed rather than as a professional judgment to be made. Taba (1962) argued that teachers should design

call@pnu.edu.ph

curriculum because we are the ones who see the learners. Taking that seriously means the Planner is not doing clerical work at all, and that is a demanding standard to hold when the period is fifty minutes long and there are fifty learners in the room.

2. From the competencies indicated in the PPST Survey which you have accomplished, particularly in Domain 4 – Curriculum and Planning, which do you find challenging? Please state the competency/indicator and explain briefly.

In my PPST self-assessment, I rated myself as a Practitioner in three of the five strands of Domain 4, but I marked myself only Apprentice in two, and both are the ones I find genuinely challenging.

Strand 4.1 – Indicator 4.1.1: *Prepare developmentally sequenced teaching and learning processes to meet curriculum requirements.* I rated this Apprentice. I can plan a single lesson, but sequencing a whole unit so that learning genuinely builds from simple to complex, while respecting spiral progression and surviving a school year with typhoon suspensions and school activities, is something my informal teaching never demanded of me. In informal settings I could adjust freely; the discipline of a Budget of Work and a scope and sequence is still new to me.

Strand 4.2 – Indicator 4.2.1: *Identify learning outcomes that are aligned with learning competencies.* I also rated this Apprentice. I understand the principle well, and my research background makes me careful about the verb in an objective. What I lack is practice in unpacking a coded DepEd competency into lesson-sized, measurable outcomes without quietly lowering its level. It is easy to take a competency written at Analyze and unpack it into three days of identification exercises, and I want to be able to notice myself doing that.

Both gaps come from the same source, which is my limited formal classroom experience rather than a lack of subject knowledge. My plan is to close them deliberately: studying backward design and curriculum mapping, practicing sequencing against the MATATAG curriculum guides, writing measurable outcomes using the revised Bloom's taxonomy, and asking mentors to check my alignment. I would rather name these honestly now than claim a competency I have not earned. Admitting what I do not yet know is not a weakness; it is where the work begins.
