

2E- EDUC - 3 - Principles and Methods of Teaching

SY 2025-2026 Term 2

**Worksheet #3 – New Literacies / 21st Century Skills and Awareness of the Current World
Problems in Relation to the 17 UN SDGs : Entry Point for Integration into the School
Curriculum (as Framework for “Project Work/Developing Creative and Integrated Lesson
Plans)**

Name : Kenn Arcenal

Date submitted: July 27, 2026

Part 1. Directions

- Reflect on the New/21st Century Literacies (i.e. Multicultural and Global Literacy, Media Literacy, Cyber/Digital Literacy, Social Literacy, Financial Literacy, Ecological Literacy, Arts and Creativity Literacy, and Science Literacy).
- Do honest self- assessment on how you perceive you possess the knowledge, awareness and skills of the new / 21st Century literacies.
- Rank/ order your top 3 new literacies you perceived you are Strong at and top 3 new literacies you perceived you are Weak at. Give justifications or reasons for your assessment.

A. My Perceived Three Strong and Three Weak New/21st Century Literacies

Top 3 Strong New Literacy/ 21 st Century Literacies		Top 3 Weak New literacy/21 st Century Literacies	
21 st Century Literacy	Justifications/ Reasons	Literacy	Justifications/ Reasons
1. Globalization and Multicultural Literacy	Teaching English to learners from preschoolers to working professionals, and later working in a multicultural setting, has trained me to move comfortably across cultures and to treat difference as a resource rather than a barrier. My volunteer work with Filipino communities abroad and my free	1. Financial Literacy	While I can manage everyday personal finances, I am less confident teaching financial concepts such as budgeting, investing, saving systems, and economic decision-making in a structured way. This has never been a focus of my teaching, so I would need deliberate study before I could

call@pnu.edu.ph

	seminars for learners of varied backgrounds since 2017 have made intercultural understanding a daily habit rather than a theory.		integrate it meaningfully into lessons.
2. Social Literacy	Running free workshops and community seminars for years has sharpened my ability to read a room, adjust my communication to different audiences, and build rapport quickly with learners of every age. Facilitating groups that range from shy children to seasoned teachers has made collaboration, empathy, and clear interpersonal communication among my strongest skills.	2. Ecological Literacy	I care about environmental issues, but my knowledge of ecological systems, climate science, and sustainability practices is more general than expert. To teach it responsibly I would need a firmer grasp of local environmental data and of how ecological concepts connect to everyday Filipino community life.
3. Arts and Creativity Literacy	My teaching leans heavily on creative, gamified, and multimodal strategies, because meaning tends to stick when learners make and do rather than merely listen. Designing engaging activities, visuals, and playful tasks for widely different learners has become second nature and is a strength I consciously rely on.	3. Science Literacy	My background and teaching have centered on language and communication rather than the sciences, so my command of scientific reasoning, data interpretation, and current scientific issues is an area for growth. I can appreciate science, but integrating it confidently across lessons would

			require further preparation.
--	--	--	------------------------------

1. As a future teacher, what are the benefits of knowing your strong and weak new literacies /21st century literacies?

Knowing my strong and weak literacies gives me an honest starting point, and honesty about oneself is the first requirement of good planning. My strengths tell me where I can lead confidently and even mentor others, while my weaknesses tell me exactly where to direct my own learning before I stand in front of a class claiming to teach them. This self-awareness protects my learners because a teacher who is unaware of a gap will pass it on without noticing. It also lets me plan strategically: I can lean on my strengths to design engaging lessons, seek training or a co-teacher for financial and science literacy, and pursue targeted study to close the gaps over time. In a curriculum that increasingly demands all eight literacies, pretending to be equally strong in each would be dishonest and ineffective, whereas naming my real profile lets me grow deliberately and model lifelong learning for my students.

B. Looking at the Philippine National Problems/Issues in the Perspectives of New Literacies for Integration in the School Curriculum

New/21st Century Literacies	Current problems and issues associated /related to the new literacies in the country today	List of the Most Suitable School Subjects or Topics as entry points for integration	Suggested possible Actions/ Teaching and Learning Approaches/Methods/Strategies (as ways of integration) to address the identified problems
Globalization and Multicultural Literacy	Discrimination against indigenous peoples and Muslim Filipinos; regional and cultural bias; loss of local languages and culture amid globalization.	Araling Panlipunan; English; Filipino; Values Education (respect for diversity, Philippine history and cultures).	Multicultural projects, culture-sharing days, and literature from different regions, so learners meet cultures as lived experience rather than distant facts; contextualized and indigenized examples that honor the learners' own community; guided discussion of how global events touch local life.
Media Literacy	Widespread disinformation and fake news; manipulation	English; Araling Panlipunan; Media and Information Literacy (SHS);	Fact-checking and source-evaluation tasks using real posts learners actually encounter; comparing how two

	during elections; unverified viral content shared without checking.	Values Education.	outlets cover the same event to expose framing; guided practice in spotting bias, propaganda, and manipulated images.
Cyber/Digital Literacy	Cyberbullying, online scams, and privacy violations; the digital divide between well-resourced and poor schools; excessive screen dependence.	TLE / ICT; MAPEH (health); Values Education; Homeroom Guidance.	Digital-citizenship lessons and safe-behavior role plays on scams, privacy, and cyberbullying; class responsible-use agreements; low-cost or offline alternatives such as printed tasks or phone sharing so the lesson still reaches learners without devices.
Social Literacy	Bullying and weak conflict-resolution skills; declining face-to-face interaction; mental-health and belonging concerns among youth.	Values Education / GMRC; MAPEH (health); Homeroom Guidance; all subjects through group work.	Cooperative learning and peer mentoring that give every learner a role; structured group tasks that require listening, not only talking; role plays on empathy and conflict resolution; classroom norms that make every learner feel they belong.
Financial Literacy	Widespread poverty and debt; poor saving and budgeting habits; vulnerability to lending schemes and get-rich-quick scams.	Mathematics; Araling Panlipunan (economics); EPP / TLE (entrepreneurship).	Real-life budgeting simulations and saving-versus-spending scenarios tied to the learners' own allowance or family income; simple sari-sari store or business projects; math word problems drawn from actual household budgets.
Ecological Literacy	Frequent typhoons and flooding; plastic pollution; deforestation and biodiversity loss; climate-change vulnerability.	Science; Araling Panlipunan; TLE (gardening); MAPEH.	Tree-planting and clean-up drives, a classroom waste-segregation system, and a school garden that makes the lesson ongoing rather than one-time; project-based learning on a real local problem such as flooding or plastic waste.
Arts and Creativity Literacy	Undervaluing of the arts as non-essential; limited creative outlets; fading appreciation of local and indigenous art	MAPEH (arts, music); Filipino; English (creative writing).	Creative projects and integrated arts that let learners show understanding through drawing, music, or performance and not only writing; appreciation of local and indigenous art forms; exhibits or performances that celebrate Filipino culture.

	forms.		
Science Literacy	Vaccine hesitancy and health misinformation; low public trust in science; weak performance in international science assessments.	Science; MAPEH (health); Araling Panlipunan.	Inquiry-based and problem-based learning built around a real question; simple low-cost experiments; evidence-evaluation tasks that help learners tell science from the health misinformation they meet online or at home.

1. Why is it important to be aware of the current problems today in relation/inherent to the new literacies?

Awareness of current problems is what makes the new literacies real rather than abstract. If I teach media literacy without pointing to actual disinformation my learners encounter, or financial literacy without naming the debt and scams that affect their families, the lessons stay academic and forgettable. Knowing the problems lets me anchor each literacy in the lived realities of Filipino learners, which makes learning relevant, urgent, and transferable to life outside school. It also lets me prepare learners to face and help solve these problems as informed, responsible citizens, which is the deeper purpose of education. Finally, awareness lets me anticipate the sensitivities each issue carries, so that a lesson on disinformation or inequality is handled with fairness rather than avoided out of discomfort.

2. What do you think are the challenges, problems or concerns that you will encounter teaching or integrating the new /21st century literacies in your lessons?

The first challenge is my own uneven profile. As I admitted above, I am strong in some literacies and weak in others, so integrating financial, ecological, or science literacy honestly will require me to learn before I teach. A second challenge is the resource gap in many public schools, since cyber and digital literacy in particular are hard to teach where devices, electricity, or internet are limited. A third is time and an already-full curriculum, because integrating eight literacies on top of the required competencies risks overloading both teacher and learner if not planned carefully. There is also the challenge of contextualization, since a strategy that works for one community may not fit another with different problems, languages, and resources. Finally, some literacies touch sensitive ground, such as media literacy near politics or social literacy near mental health, and these must be handled with care and maturity.

Part 2. Direction:

1. Study very well and understand the concept of Sustainable Development and the 17 United Nations Sustainable Development Goals (SDGs) from different sources such as
<https://sdg.neda.gov.ph/sdgs/>
<https://www.youtube.com/watch?v=Vo6k2rRhXTU/>
<https://www.youtube.com/watch?v=Tu-ijw4dLzo>, / <https://www.youtube.com/watch?v=FRZiXdL30d4>
2. Be aware of the Philippine Development Plan 2023-2028 at this link:
<https://www.youtube.com/watch?v=zt7pNmDnF98>

3. Individually accomplish the tables below and upload in ePNU.

+++++

Brief Information on SDGs?

The Sustainable Development Goals (SDGs) are also known as the Global Goals. The SDGs are new, universal set of goals, targets and indicators that UN member states will be expected to use to frame country agendas and policies over the next 15 years. It consists of 17 goals, 169 targets and 232 unique indicators. The SDGs is a comprehensive set of goals recognizing the connections between the people and the planet, comprised of 169 targets, integrated and indivisible to balance the three dimensions of sustainable development: the economic, social and environmental.

There are 244 indicators listed in the final indicator. However, since nine indicators repeat under two or three different targets, the actual total number of individual indicators in the list is 232.

LEAVE NO ONE BEHIND. This is what guided world leaders of 193 countries to solving the globe's most pressing problems of today.

Poverty. Hunger. Inequality. Climate Change. The Millenium Development Goals (MDG) were on its 15-year deadline, and although it was a success, people knew that there was a need to continue the legacy of the MDG and build on a more sustainable future— not only for the generation today, but for the future generations to come.

As a result, the United Nations, along with 193 countries of different backgrounds and cultures, adopted the 2030 Agenda for Sustainable Development, with 17 SDGs at its core.

The phrase Leave No One Behind was the guiding principle for these goals, and was actually the official motto set by the United Nations. The SDGs was meant to be inclusive, for everyone. It was meant to provide a comprehensive roadmap— a guide for us to achieve the future we want. A future where everybody is able to have food in their tables with their families, a future where employment is attainable to everyone, and a future where citizens do not live on less than \$1.25. A future where our natural resources are taken care of. This is the future we want.

The Philippine Development Plan (PDP) is the blueprint of the government where priorities of the political leadership are translated into policy and strategy framework and, then, into programs and projects. From policy to action, the PDP reflects all of the 17 SDGs. The integration of the SDGs in the PDP is essential, as this document serves as a guide to the national budget planning and appropriations (which goes through Congressional Budget Hearings). It is worth noting that actions taken to achieve the SDGs should be viewed as complementary, if not concurrent, activity with the implementation of the PDP.

The Philippine Development Plan 2023-2028 is a plan for deep economic and social transformation to reinvigorate job creation and accelerate poverty reduction by steering the economy back on a high-growth path. This growth must be inclusive, building an environment that provides equal opportunities to all Filipinos, and equipping them with skills to participate fully in an innovative and globally competitive economy.

ENSURE INCLUSIVE AND EQUITABLE QUALITY EDUCATION AND PROMOTE LIFELONG LEARNING OPPORTUNITIES FOR ALL

First, the bad news on education. Poverty, armed-conflict, and other emergencies keep many, many kids around the world out of school. In fact, in developing regions, kids from the poorest households are four times more likely to be out of school than those of the richest households. Now for some good news. Since 2000, there has been enormous progress on the goal to provide primary education for all children worldwide. The primary school enrollment rate in developing regions reached 91%. By measures in any school, that's a good grade. Now, let's get an even better grade

for all kids and achieve the goal of universal primary and secondary education, affordable vocational training, access to higher education, and more.

BY 2030:

Targets: By 2030

1. **Ensure that all girls and boys complete free, equitable and quality primary and secondary education** leading to relevant and Goal-4 effective learning outcomes
2. **Ensure that all learners acquire the knowledge and skills needed** to promote sustainable development, including, among others, through education for sustainable development and sustainable lifestyles, human rights, gender equality, promotion of a culture of peace and non-violence, global citizenship and appreciation of cultural diversity and of culture's contribution to sustainable development
3. **Substantially increase the supply of qualified teachers**, including through international cooperation for teacher training in developing countries, especially least developed countries and small island developing states
4. **Ensure equal access for all women and men** to affordable and quality technical, vocational and tertiary education, including university
5. **Substantially increase the number of youth and adults** who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship
6. **Eliminate gender disparities in education and ensure equal access to all levels of education and vocational training for the vulnerable**, including persons with disabilities, indigenous peoples and children in vulnerable situations
7. **Ensure that all youth and a substantial proportion of adults**, both men and women, achieve literacy and numeracy
8. **Build and upgrade education facilities** that are child, disability and gender sensitive and provide safe, nonviolent, inclusive and effective learning environments for all
9. **Substantially expand globally the number of scholarships available to developing countries**, in particular, least developed countries, small island developing States and African countries, for enrolment in higher education, including vocational training and information and communications technology, technical, engineering and scientific programmes, in developed countries and other developing countries

	Faced by our country today	Topics/Sub-Topics as entry point for integration in the school curriculum/lesson planning	(high occurrence and high probability for an integration)
#1- No Poverty	Widespread poverty and deep income inequality, with many families living on very low daily incomes and limited access to basic needs.	Araling Panlipunan (economic issues); Mathematics (budgeting); EPP / TLE (livelihood).	Financial Literacy and Social Literacy
#2- Zero Hunger	Child malnutrition and stunting, food insecurity in poor households, and the low income of farmers who grow the nation's food.	Science (nutrition); TLE (agriculture, food production); Araling Panlipunan.	Ecological Literacy, Science Literacy, Financial Literacy
#3- Good Health and Well-being	Health misinformation online, rising mental-health concerns among youth, recurring disease outbreaks, and teen health issues.	MAPEH (health); Science (human body, diseases); Homeroom Guidance.	Science Literacy, Media/Digital Literacy
#4- Quality Education	Learning poverty and low reading proficiency, dropouts, unequal access between rich and poor areas, and large class sizes.	All subjects; Values Education; Homeroom Guidance (study habits, learning goals).	Digital Literacy, Social Literacy
#5- Gender Equality	Gender-based discrimination, violence against women and children, and unequal opportunity in school and work.	Araling Panlipunan (human rights); Values Education; English (literature on gender).	Social Literacy, Media Literacy, Globalization and Multicultural Literacy
#6- Clean Water and	Lack of safe	Science (water cycle,	Ecological

Sanitation	drinking water in remote areas, poor sanitation facilities, and pollution of rivers and water sources.	pollution); Araling Panlipunan; TLE (sanitation).	Literacy, Science Literacy
#7- Affordable and Clean Energy	High electricity costs, energy poverty in far-flung areas still without power, and heavy reliance on fossil fuels.	Science (energy, renewable sources); Araling Panlipunan; TLE.	Science Literacy, Ecological Literacy
#8 – Decent Work and Economic Growth	Unemployment and underemployment, low wages, and the labor migration that separates many families.	Araling Panlipunan (economics, labor); EPP / TLE (entrepreneurship, career).	Financial Literacy
#9 – Industry, Innovation and Infrastructure	Weak infrastructure, limited research and innovation, and a digital divide between well-served and underserved schools.	Science; TLE / ICT; Mathematics (measurement, design).	Cyber / Digital Literacy
#10- Reduced Inequalities	A wide gap between rich and poor and the marginalization of indigenous peoples, persons with disabilities, and the poor.	Araling Panlipunan (social issues); Values Education (respect, inclusion).	Globalization and Multicultural Literacy, Social Literacy
#11- Sustainable Cities and Communities	Traffic and congestion, informal settlements with poor services, and communities highly exposed to disasters.	Araling Panlipunan (urbanization); Science (disaster preparedness); MAPEH.	Ecological Literacy, Science Literacy, Media Literacy
#12 – Responsible Consumption and Production	Heavy plastic waste, a throwaway culture of overconsumption,	Science (waste, materials); TLE (recycling projects); Values Education.	Ecological Literacy, Science Literacy, Media Literacy

	and poor waste-management systems.		
#13 – Climate Action	Frequent typhoons and flooding, rising temperatures, and the country's high vulnerability to climate change.	Science (climate, weather); Araling Panlipunan (disaster risk reduction).	Ecological Literacy, Science Literacy, Media Literacy
#14- Life Below Water	Overfishing, destruction of coral reefs and marine habitats, and plastic pollution in seas and coasts.	Science (marine ecosystems); Araling Panlipunan (Philippine waters).	Ecological Literacy, Science Literacy, Media Literacy
#15- Life on Land	Deforestation, loss of biodiversity, and continued illegal logging in protected areas.	Science (ecosystems, biodiversity); TLE (gardening, tree planting).	Ecological Literacy, Science Literacy, Media Literacy
#16- Peace, Justice and Strong Institutions	Corruption, injustice and slow legal processes, conflict in some regions, and weak public trust in institutions.	Araling Panlipunan (governance); Values Education (honesty, justice); English (persuasive texts).	Media Literacy, Social Literacy, Global and Multicultural Literacy
#17- Partnership for the Goals	The need for stronger cooperation among government, schools, and communities, and for fairer global partnerships.	Araling Panlipunan (global cooperation); all subjects through collaborative projects.	Globalization and Multicultural Literacy, Arts and Creativity Literacy

Answer briefly.

1. Why do you think it is important to integrate the concept of Sustainable Development / Sustainable Development Goals (SDGs) in the school subjects/curriculum/lesson planning?

Integrating the SDGs matters because education is meant to prepare learners not only for tests but for the real world they will inherit, and that world is defined by the very problems the SDGs name: poverty, hunger, inequality, and climate change. Bringing the SDGs into lessons makes

learning purposeful, showing students that their subjects connect to genuine national and global issues rather than existing in isolation. It also develops values and a sense of responsibility, since learners begin to see themselves as citizens who can contribute to solving these problems. Practically, the SDGs give teachers a ready framework for contextualized, relevant, and integrated lessons, allowing several subjects and literacies to converge on one meaningful theme. Since the Philippine Development Plan itself reflects all 17 SDGs, teaching them also aligns classroom work with the country's own national direction. Integration likewise gives even young learners a sense that their small actions, from saving water to reducing waste, connect to something larger than themselves.

2. What do you think are appropriate teaching approaches, methods or strategies that teachers could use to integrate the SDGs in the school subjects/curriculum/lesson planning? Please specify.

The most fitting approaches are those that make learners active and connect school to real life. Project-based learning lets students work on authentic outputs tied to an SDG, such as a school clean-up campaign for SDG 13 or a budgeting project for SDG 1. Problem-based and inquiry-based learning invite learners to investigate a real community problem and propose solutions, which builds both content knowledge and critical thinking. Integrative and thematic teaching allows one SDG to cut across several subjects, so climate action might appear in Science, Araling Panlipunan, and English at once. Cooperative learning develops the social skills the goals themselves require, while service learning and community involvement, such as tree-planting or advocacy drives, turn awareness into action. Case studies and real-world data analysis let learners examine actual reports on poverty, hunger, or health and draw their own conclusions, and simulations and role-playing, such as a mock climate summit or a barangay budget hearing, let them experience the trade-offs behind each goal. Debates and structured discussion on issues like gender equality or responsible consumption sharpen reasoning and expose learners to multiple perspectives, while storytelling, film analysis, and the arts open an emotional entry point that dry facts cannot. Field trips, immersions, and guest speakers from the community bring the goals close enough to touch, and gamified tasks or SDG-themed challenges keep younger learners engaged. Technology and digital tools support all of these, from research and infographics to online advocacy campaigns, and portfolio and reflective journaling let learners document what they have done and internalize the values behind it. Contextualization and localization keep each goal grounded in the learners' own community, and reflective discussion helps students internalize values rather than merely memorize goals.

3. What do you think are the challenges, problems or concerns that you will encounter in integrating SDGs in your lessons? Be specific of the SDG and provide examples.

I believe that resource limitations are the most immediate: A lesson on SDG 7 (Affordable and Clean Energy) does not make sense in a far-flung barangay school in Mindanao that still runs on a shared generator, just as an activity on SDG 9 (Industry, Innovation and Infrastructure) stalls when a class of sixty shares a handful of working computers, and any hands-on plan for SDG 6 (Clean Water and Sanitation) collapses in a school whose own comfort rooms have no running water.

Also, the Philippine education system is just as unforgiving. With teachers already racing to finish MELCs before the quarterly test, an SDG lesson can shrink into a slogan on a bulletin board or a poster-making contest that touches nothing deeper, which is the tokenism the goals are meant to avoid. Certain topics also demand delicate handling: raising SDG 16 (Peace, Justice and Strong Institutions) in a town where a political clan holds power can make both learners and teachers uneasy, and discussing SDG 5 (Gender Equality) can collide with conservative or religious convictions at home, so a careless remark risks a call from a parent the next morning. Assessment also poses a quieter problem, since a child may write a flawless essay on SDG 12 (Responsible Consumption and Production) yet still toss a candy wrapper on the floor on the way out, and the real change the goals seek is far harder to measure than a test score. There is the pull of sustainability too, such as a single tree-planting photo-op for SDG 13 (Climate Action) or a one-day Brigada Eskwela clean-up that feels productive but fades once the cameras leave, unless it becomes a habit the school genuinely keeps.

Finally, Poverty threads through all of it, for it is difficult to teach SDG 2 (Zero Hunger) with conviction to learners who came to class without breakfast, or SDG 1 (No Poverty) to those whose families depend on their after-school labor to eat.
