The FUTURE is NOW.

E- Educ- 3 - The Teacher and the School Curriculum

Worksheet 2 - Comparative Analysis of the Philosophy, Vision and Mission of the Selected Higher Education Institution (HEIs) and/or Teacher Education Institutions (TEIs) in the Philippines

Name: Kenn Arcenal

Date Submitted: August, 2026

- I. Select two (2) institutions of higher learning in the Philippines and compare them according to the information called for in the table below.

Areas of Comparison	Name of Higher Education Institution/Teacher Education Institution	
	Philippine Normal University (PNU)	Manuel L. Quezon University (MLQU) [Author's alma mater, 2008–2011: then at its historic Quiapo campus, R. Hidalgo St., Manila; now at EDSA, Quezon City since 2016]
Philosophy	Anchored on "Education for Personal Renewal and Social Transformation." It holds that personal renewal and empowerment restore a positive, healthy consciousness among Filipinos, so that they believe in themselves and can contribute to a society driven to transform.	Founded on the principle "Pro Patria Et Jure" (For Country and Law) and the philosophy of "Know Thyself." This identity has held constant from its establishment up to the present. It is rooted in the founders' idealism of giving ambitious but financially disadvantaged young people the education and professional training needed to get ahead in life.
Vision	PNU shall become an internationally recognized and nationally responsive teacher education university, the primary center of excellence in teacher education and educational leadership in the Philippines and in Asia, and the established producer of high-quality teachers and education leaders.	Then and now, MLQU envisions itself as a home of competent, ethical nation builders formed in the spirit of "Pro Patria Et Jure." In its current wording, it aspires to be a premier institution providing holistic quality education and serving as the learning center of nation builders and stewards of sustainable development.
Mission	As the National Center for Teacher Education, PNU commits to provide inclusive, innovative, impactful, and sustainable teacher education programs that produce future-ready teachers and education leaders imbued with the values of truth, excellence, and service, ensuring	To provide holistic quality education through excellent instruction by educators and leaders in their fields, forming professionals of competence and integrity for the service of country. The present statement adds developing innovative, ethical, and culture-sensitive professionals

	social equity of access.	engaged in inclusive and sustainable development through quality instruction, research, and extension.
Core Values	Truth, Excellence, and Service, expressed through instrumental values such as Commitment, Integrity, Solidarity, Flexibility, Efficiency, Openness, and Self-Worth.	Moral Righteousness (God-fearing, upright conduct), Academic Excellence, Professional Competence and Integrity, and Nationalism / Service to Country
Goals/Objectives	To lead in teacher education and educational leadership through its core functions of instruction, research, extension, and production; to modernize the continuing education and training of Filipino teachers; and to produce empowered, future-ready educators.	To produce competent, ethical, and nation-serving professionals; to widen access to quality education for deserving and financially challenged students; and to advance instruction, research, and extension.
Kind/Type of Educational Philosophy	Predominantly Social Reconstructionism and Progressivism. Its call for “personal renewal and social transformation” and “social equity of access” frames education as a means to reform society, while its learner-empowering, future-ready orientation reflects progressivist thought.	Predominantly Essentialism with a strong Nationalistic and Perennialist strain. Its emphasis on discipline, moral righteousness, mastery of an essential professional field, and “Know Thyself” reflects essentialist and classical ideals oriented toward country and law. This orientation was equally evident in the author’s time.
Social Responsibility	Producing empowered teachers who uplift Filipino learners nationwide, ensuring equity of access to quality education, and serving communities through extension and research as the flagship national university for teacher education.	Opening the door of quality education to ambitious but financially disadvantaged youth (its founding purpose), forming ethical nation builders, and instilling service to country and law-abiding citizenship. Today this is further framed around sustainable development.

II. Reflections

1. Please explain/describe the dominant philosophical foundations (i.e. perennialism, essentialism, progressivism, reconstructionism, constructivism) embodied by the two educational institutions you selected as shown above.

The two institutions rest on different philosophical foundations that still meet at one point. Philippine Normal University is mainly reconstructionist and progressivist. Its philosophy, “Education for Personal Renewal and Social Transformation,” and its promise of “social equity of access,” treat education as a means to reform society and empower those left out, which is the core of social reconstructionism, while its future-ready and inclusive orientation adds a progressivist strand. Manuel L. Quezon University leans the other way. Its principle “Pro Patria Et Jure” and its philosophy of “Know Thyself” stress discipline, moral uprightness, and mastery of an essential body of professional knowledge, which are marks of essentialism carried by the classical ideals of perennialism. What is easy to miss is that both still share a thread of social uplift, PNU through equitable teacher education and MLQU through its founding mission for poor but deserving youth. The contrast is worth stating plainly. PNU looks outward and asks how education can change society, while MLQU looks first inward and forms ethical, self-knowing professionals who then serve the country. The deeper lesson

is that a stated philosophy only matters if a school actually lives it, since either institution could name these ideals on paper and still teach in a way that betrays them.

2. Recalling your educational experience in your school days, which of the psychological foundations (i.e. Behavioral learning theories (Association and Behaviorism), Cognitivist learning theories (Cognitive Information Processing theory; Humanistic learning theories/Phenomenology) influenced the most your educational experiences during your elementary level, secondary level and tertiary level? Why do you say so? Please give examples/cases/situations.

Looking back on my own schooling, I can see all three psychological foundations at work, each ruling a different stage. My elementary years were shaped most by behaviorist learning theory. Learning then ran on association and reinforcement, from memorizing multiplication tables through drills to earning stars for good work and behaving well to avoid a scolding. Much of what stayed with me from those years came through repetition and reward, exactly as behaviorism describes. My secondary years leaned toward cognitivist theory and information processing. The work grew less about repeating and more about understanding, such as organizing ideas and connecting new lessons to what I already knew. I learned best when a teacher helped me relate ideas rather than just memorize them. My tertiary years, spent at Manuel L. Quezon University in Quiapo, Manila from 2008 to 2011, were shaped most by humanistic theory. By then learning had become personal and self-directed, and what carried me was meaning and the belief of a few mentors who saw my potential before I did. Studying at a school founded to open doors for financially disadvantaged youth quietly shaped my own conviction that education must lift those the world overlooks. What this progression taught me is not simply that the stages differ but that no single theory is enough on its own. A teacher who uses only drill, or only self-direction, will fail learners at the wrong stage, and that is why I now try to see each learner as a whole person rather than a method to apply.

3. Explain your personal insights on the relevance/influence of Philosophy, Vision, and Mission, and Core Values in the planning of the institution's /school curriculum.

The Philosophy, Vision, Mission, and Core Values are the soul of a school, and a sound curriculum is simply their translation into a plan of learning. Each plays a part. The philosophy says what education is for, the vision names where the school is going, the mission states what it does daily to get there, and the core values set the character it expects of its graduates. A curriculum that ignores these becomes a list of subjects with no direction, while one aligned with them gives every lesson a reason to exist. The alignment is practical, not decorative. A school whose vision is to form socially transformative teachers must build in community immersion and critical reflection, and a school whose philosophy is "Know Thyself" and service to country must cultivate discipline and civic responsibility. In this way the PVMCV decides what is taught and how learning is judged, so that intention and practice

point the same way. The critical point, though, is that these statements are only as real as they are lived. Many schools print fine words and then teach in ways that contradict them, so the true test is not how noble the vision sounds but whether a graduate actually leaves embodying it.

Planning For Establishing Our Future School

Group No: 2 (English Group)

Members:

1. Ivan Dione Soria
2. Rose Marianne Louis Gardoce
3. Donna Jane Panaguiton
4. Kenn Arcenal

Date Submitted: August 24, 2026

1. This assignment will be accomplished by the same grouping as in lesson planning.
2. After individually undergoing a comparative analysis of the curriculum foundations, PVMGO of higher education/teacher education institutions, and discussions on curriculum approaches and designs, your group will plan to establish your own future school.

Scenario

Imagine that your group are incorporators of an educational / school enterprise who plan to establish your own school in the near future. In the planning stage, your group has assembled successful educational experts and school administrators and leaders, curriculum specialists, and educators for a consultative meeting. After much deliberations on matters about the philosophical, psychological, historical and socio-cultural foundations of your school, its philosophy, vision, mission and curriculum approaches and design, your group has finally reached to a decision and are ready to present in the next meeting with other incorporators. Please complete the information on the table below regarding the details of your future school.

Information About our Future School	Our Justification / Explanation
	An integrated K to 12 school lets us follow learners across every stage and build foundational literacy, values, and skills without the ruptures that come from transferring between institutions.
	A co-educational setting reflects the real, diverse society learners will live and work in and supports our commitment to equity and gender inclusivity.
	We deliberately choose an underserved rural area because talent is

	scattered everywhere while opportunity is not; our school is meant to reach the learners the system most often overlooks.	
	Details	Our Justification/ Explanation
Philosophy	Philosophy: “Every Learner a Light” — education for personal flourishing and social transformation, grounded in the belief that a gifted or good-hearted mind can sprout anywhere, regardless of income or address.	This philosophy fuses existentialism (each learner is free to define themselves) with social reconstructionism (education as a tool to lift the overlooked and reform society). It directly reflects our conviction that circumstance must never decide a child’s future.
Vision	Vision: A community of empowered, self-aware, and compassionate learners who use their gifts for the good of others and help build a more just and sustainable nation.	The vision names where we are going: not merely high scorers, but whole persons who think, feel, and act, and who turn their learning outward toward their community and country.
Mission	Mission: To provide inclusive, contextualized, and future-ready education aligned with the MATATAG Curriculum, the 21st-century literacies, and the Sustainable Development Goals, giving each learner what they truly need to flourish.	The mission translates the philosophy into daily practice through equity-driven, contextualized teaching and explicit alignment with the current national curriculum, the new literacies, and the SDGs.
Core Values	Core Values: Katotohanan (Truth), Malasakit (Compassion), Kahusayan (Excellence), Pagkakapantay-pantay (Equity), and Paglilingkod (Service).	These values distill our beliefs into a character we want every graduate to embody, joining excellence with compassion and equity so that ability is never divorced from conscience.
Social Responsibility	Social Responsibility: To widen access to quality education for the poor and marginalized, to nurture environmental and civic stewardship, and to make the school a partner in the life and problems of its community.	Following the example of institutions that opened their doors to disadvantaged youth, our school treats social responsibility as its founding purpose rather than an afterthought, tying learning to real community and SDG concerns.
Philosophical Foundation (Choose from among the following or combinations that embodies the educational philosophy of your future school and justify)		Chosen: Existentialism and Reconstructionism (with a progressivist method).
A. Perennialism	Perennialism	Not primary. We respect enduring truths and strong foundational literacy, but we reject a fixed, universal canon as the core aim.
B. Essentialism	Essentialism	Partly. We value mastery of essential skills and knowledge, but not as an end in itself.
C. Existentialism	Existentialism	PRIMARY. Each learner is a free, unrepeatable person who must be helped to define and author their own life; teaching begins from the learner’s own experience and choices.
D. Pragmatism	Pragmatism	Supporting. Learning is tested in real experience and real community

		problems, not in abstraction alone.
E. Progressivism	Progressivism	Method of choice. Learner-centered, experiential, inquiry- and project-based teaching that trusts learners with ownership of their growth.
F. Reconstructionism	Social Reconstructionism	PRIMARY. Education exists to confront inequality and transform society; our school is built to lift the overlooked and serve the common good.
G. Constructivism	Constructivism	Supporting. Learners actively construct meaning by connecting new learning to what they already know and do, especially through their own language and context.
Psychological Foundation (Which among the three or combinations would dominate /influence curriculum development in your future school?)		Chosen: Primarily Humanistic, integrating Cognitivist method and selective Behaviorist technique.
A. Behavioral learning theories (Association and Behaviorism)	Behavioral learning theories (Association and Behaviorism)	Used selectively for foundational habits and positive classroom routines through clear expectations and encouragement, never as the whole of learning.
B. Cognitivist learning theories (Cognitive Information Processing theory)	Cognitivist learning theories (Cognitive Information Processing)	Central to instruction: we help learners organize, connect, and make meaning of information, building understanding rather than mere recall.
C. Humanistic learning theories/Phenomenology	Humanistic learning theories / Phenomenology	PRIMARY. Learners are whole persons with needs, feelings, and purpose; we teach the self-aware, self-directed learner and meet emotional and security needs first, after Maslow.
Curriculum Approach (Please specify which specific type or combinations of each type your future school will adopt and explain)		Chosen: Non-technical / Non-scientific approach- Humanistic, with a Reconstructionist orientation.
A. Technical-Scientific and types	Technical-Scientific and types	
a. Behavioral-Rational	Behavioral-Rational	Not primary - too rigid and objectives-bound for our learner-centered aims.
b. Systems-Managerial	Systems-Managerial	Used only lightly for sound school organization.
c. Intellectual Academic	Intellectual Academic	Respected for rigor but not our central frame.
B. Non-technical-Non-scientific and types	Non-technical / Non-scientific and types	
a. Humanistic	Humanistic	PRIMARY approach. Curriculum centers on the learner as a whole person, on meaning, growth, and

		self-actualization rather than on efficiency.
b. Post-modern Reconceptualist	Post-modern Reconceptualist	Supporting. We invite reflection on power, equity, and whose knowledge counts.
c. Reconstructionist	Social Reconstructionist	PRIMARY orientation. Curriculum is aimed at social justice and transforming the learners' community and nation.
Curriculum Design Approaches (Please specify which one or the combinations your future school will adopt and explain)		Chosen: Problem-centered design (life-situations / social-problems / reconstructionist), integrated with Child-centered (experience-centered) design.
A. Subject-centered design and type	Subject-centered design and type	
- Subject design , discipline design, broad field design, correlation design, process design)	Subject design, discipline design, broad field design, correlation design	Used partially for foundational competencies, since basic literacy and numeracy still need structured content.
B. Child-centered design and type	Child-centered design and type	
- Child-centered design, experience-centered design, romantic/radical design, humanistic design	Child-centered design, experience-centered design, romantic/radical design	Integrated. Learning starts from the learner's own experience, interests, and language.
C. Problem-centered design and type	Problem-centered design and type	
- Life-situations, social problems/reconstructionist design	Life-situations, social problems / social reconstructionist design	PRIMARY. Learners engage real community and national problems tied to the SDGs, so learning is relevant, active, and socially transformative.

II. Please do the following:

1. Using a mind map, make a diagrammatical/graphical representation of your future school described above.

2. Explain how you would consider the socio-cultural factors (i.e. economy, science and technology, improved communication, politics, culture, family/society, population, etc.) in developing the curriculum of your future school.

In developing our future school's curriculum, we would treat socio-cultural factors as design inputs rather than background, because a curriculum cut off from the life of its community cannot transform it. The local economy would shape our offerings, so in an underserved rural setting we would build in livelihood and financial literacy and align senior high tracks with real local opportunities, so that education leads somewhere for families with little to spare. Science and improved communication would serve as tools of equity, bringing a wider world to learners kept at its edges, while we keep low-technology paths ready so that no child is shut out for lack of a device. Politics and governance would enter as civic education, forming learners who can spot disinformation and take part honestly in public life. Culture and family would be honored as a foundation, not an obstacle, so we would localize lessons in the learners' own language and traditions and treat parents as real partners, since a child is shaped more hours outside our walls than within them. Population realities like large classes and diverse learners would push us toward inclusive and differentiated design. The pressing problems named by the Sustainable Development Goals, from poverty to climate vulnerability, would give the curriculum its real themes. The honest difficulty worth naming is that considering every factor is easier to write than to do. Time and teacher training are limited, so the real work is choosing which factors matter most for this community and building the curriculum around them rather than pretending we can address all at once.
